REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.,
 &c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour to submit, for your Excellency's consideration, the Fiftieth Annual Report of Marriages, Births and Deaths in Ireland, in which are comprised the details for the year 1913.

GENERAL SUMMARY.

The following Table (I.) shows that the Marriages registered in Ireland during the year 1913 numbered 22,266; the Births, 100,094; and the Deaths, 74,694. The marriage-rate was 5.08 per 1,000 of the estimated population, showing a decrease of 0.23, as compared with that for the year 1912, and of 0.12 as compared with the average rate for the ten years, 1903-1912; the birth-rate was 22.8 per 1,000 of the estimated population, being 0.2 under that for the preceding year, and 0.5 under the average rate for the ten years, 1903-1912; and the death-rate (17.1 per 1,000), was 0.6 above the rate for the preceding year, but 0.1 below the average rate for the ten years, 1903-1912.

TABLE I.—Showing for each of the years 1903-1913 the estimated **Population***; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1903-1912.

YEARS.	* Estimated Population in the middle of each year.	Numbers Registered			Number of Emigrants as returned by the Emigration returns.	Rate per 1,000 of Estimated Population.

* See page 150.

The Diagram facing this page gives the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1894-1913, and by the number of Emigrants enumerated in each of these years.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,596. The cases of vacancies or appointments which were dealt with during the year 1913, number 515.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1913, numbered 1,129 of the former and 893 of the latter); also the amount received as fees for same, in each year, since the passing of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES MADE; NUMBER OF CERTIFICATES ISSUED, AND AMOUNT received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 50 years 1864-1913.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 668. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 24 cases.

In 15 of these the parties were convicted and punished; 2 cases were dismissed; and in 7 the proceedings were abandoned; the parties (in most instances) paying the costs of court and complying with the law.

Amongst the offences dealt with the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; neglect to comply with Requisition to correct entry.

A sum of £126 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £47 8s. 9d., of which sum £19 15s. 2d. was paid for local professional assistance, and £31 8s. 0d. for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

The Marriages registered during the year numbered 22,266, being equivalent to a rate of 5.08 per 1,000 of the estimated population*; this rate is 0.23 under that for the previous year, and 0.12 below the average for the ten years, 1903-1912.

Of the 22,266 Marriages registered during last year, 15,738 were of Roman Catholics; 3,447 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,279 were in Presbyterian Meeting-houses; 452 in "Registered Buildings" belonging to various religious denominations; 331 by civil contract in the Registrars' offices; 8 were according to the usages of the Society of Friends; and 11 according to the Jewish rites.

The marriages of Roman Catholics are equivalent to a rate of 4.86 per 1,000 of the Roman Catholic population estimated to the middle of 1913, or 0.09 below the corresponding average rate for the preceding ten years, and the other marriages are equivalent to a rate of 5.71 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0.17 under the corresponding average rate for the ten years, 1903-1912.

Of the 3,447 Marriages celebrated according to the rites of the Church of Ireland, there were 32 by special licence, 2,845 by licence, and 557 after the publication of banns; in 13 instances no information was afforded as to which of these methods was adopted.

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast are based on the estimated population in the middle of the respective years, those for the provinces and counties on the population according to the Census of 1911.

TABLE IV.—**Marriages** registered in Ireland in 1913, and in each of the previous ten years, according to the **modes of celebration**, with the rate per 1,000 of the population represented:—

The number of Licences for Marriages issued by the Registrars during the year 1913 in Registered Buildings and in the Registrars' Offices was 659.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licences issued in 1913.	Number of Registered Meeting-houses in 1913.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland.	158	589	2,030
2. Reformed Synod of Ulster.	10	20	39
3. Presbytery of Antrim.	4	11	18
4. United Presbytery or Synod of Munster.	1	2	4
5. Presbytery of Ireland (United Free Church of Scotland).	5	9	10
Total.	178	631	2,101

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1913, there were 1,486 churches and chapels of the Church of Ireland, 631 registered Presbyterian Meeting-houses, and 427 "Registered Buildings" belonging to various religious denominations.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1913, is shown in the following list:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists.	264	Salvation Army.	9	"Undenominational."	1
Reformed Presbyterians.	25	Sevellers.	8	Jews.	1
Baptists.	33	"The Catholic Apostolic Church."	3	"Holiness Movement" Church.	1
Independents, or Congregationalists.	30	Non-Subscribing Unitarians.	1	Total.	427
Christian Brethren.	28	Non-Subscribing Christians.	1		
Moravians, or United Brethren.	9	Welsh Presbyterians.	1		

Of the 22,266 marriages registered during the year 1913, 5,755 were recorded in the first quarter, 5,565 in the second, 5,463 in the third, and 5,483 in the fourth quarter.

It would appear from calculations based on the figures given in the Abstract of Marriages, commencing on page 40, that the marriages of bachelors with spinsters constituted 89·6 per cent. of the total; that those of widowers and spinsters were 6·2 per cent.; that the marriages of bachelors and widows were 2·5 per cent.; and that those of widowers and widows formed 1·7 per cent. of the total marriages. Thus of the men married, 7·9 per cent. were widowers, and of the women, 4·2 per cent. were widows, so that, in 12 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1903–1913, and the average number for the ten years 1903–1912, deducting the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

It is much to be desired that the custom of omitting the ages in the certificates of marriage be discontinued, as a complete record of the ages of the persons married would be valuable; and it is regrettable that this information is not contained in the records in the majority of the entries. The entry of "minor" or "full age," as the case may be in the column for age in the register, satisfies the requirements of the law in this respect, and up to the year 1908 there appears to have been in Ireland a general and increasing inclination to take advantage of this circumstance. In the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year, while in the year 1908 such cases fell to 3,454, or only 15·2 per cent. of the total marriages recorded during 1908. The proportion of cases in which the information regarding the age of both parties was stated, rose to 21·2 per cent. in 1909, to 21·7 per cent. in 1910, and to 22·7 per cent. in 1911, falling slightly to 22·6 per cent. in 1912, but again rising to 22·9 per cent. in 1913, the actual number of instances in which both parties furnished their ages in the registers during the latter year being 5,092*. Of those married in England and Wales during the year 1911, 99·3 per cent. of husbands and wives made definite statements of age at time of marriage.

During the year, of the 22,266 men married 420, or 1·89 per cent., were under age; and of the women married 1,538, or 6·91 per cent., were minors.

The proportion of husbands who married under age in 1913 was highest in the province of Leinster, namely, 2·38 per cent., Ulster contributing the highest proportion of wives (8·25 per cent.).

It may be stated that in Ireland the percentage of persons married who were under age is very far below the corresponding percentages in England and Scotland.

* Not including 908 instances in which the age at marriage was stated by only one of the contracting parties, viz., 601 men and 261 women.

A rough test of the progress of elementary education is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1913, there were 20,972, or 94.2 per cent., of the husbands, and 21,485, or 96.5 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 20,450, or 88.9 per cent., of the husbands, and 20,889, or 90.9 per cent., of the wives, in the year 1903; and 17,815, or 82.6 per cent., of the husbands, and 17,947, or 82.7 per cent., of the wives, in the year 1893.

As compared with the corresponding results in the first of the preceding ten years the figures for 1913 show an improvement, the percentage of men married in 1903 who wrote their names being 88.9 and women 90.9; and they show a marked advance when compared with the percentage for the year 1864, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

Among men the percentages during the year 1913 for the provinces were 95 per cent. in Leinster and Munster, 94 per cent. in Ulster, and 91 per cent. in Connaught; and, among women, the percentages were as follows:—Leinster, 97; Munster, 97; Connaught, 96; and Ulster, 96.

In 265 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,545 cases, so that in 1,810 cases, or 8.1 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 20,456 marriages or 91.9 per cent., both parties wrote their names.

The following table gives for Ireland, and for each of the four provinces, the proportion per cent. of persons married in each of the eleven years 1903-1913, who wrote their names in the registers or certificates; of minors; of widowers; and of widows:—

TABLE VI.—Showing, as regards the Marriages in Ireland, and in each of the Four Provinces, during the years 1903-1913, the proportion per cent. of Persons who signed their names, of Persons not of Full Age, and of Re-marriages.

In the province of Ulster, during the year 1913, the marriage rate was highest, namely, 5·5 per 1,000 of the population, according to the Census of 1911. The rate in Leinster was 5·4 per 1,000; in Munster it was 4·7 per 1,000, and in Connaught 3·9 per 1,000.

The highest marriage rate for county, or county borough areas, was 7·6 per 1,000 of the population for the county borough of Dublin, and the lowest was 3·3 per 1,000 for the county of Galway. Between these extremes the highest rates were 7·5 for the county borough of Belfast, 5·3 for Dublin county, 5·2 for Londonderry county and county borough and 5·1 each for Limerick county and county borough, Antrim county and Down county; and the lowest were 3·7 each for the counties of Clare and Sligo, 3·9 for Queen's county, and 4·0 each for Donegal, Monaghan and Roscommon counties.

BIRTHS.

The number of births registered during the year 1913 amounted to 100,094—51,158 boys and 48,936 girls, or 104·5 of the former to every 100 of the latter—the ratio to the estimated population being 1 in 43·8, or 22·8 per 1,000, which is 0·5 below the average rate per 1,000 for the ten years, 1903-1912.

Of the 100,094 births registered in Ireland during the year, 97,273, or 97·2 per cent., were legitimate, and 2,821, or 2·8 per cent. were illegitimate, the latter being 0·2 above the corresponding average percentage for the preceding ten years. As regards illegitimacy Ireland compares favourably with most other countries.

The male children born in wedlock numbered 49,747, and the female 47,526, or 104·7 of the former to every 100 of the latter; of the illegitimate children, 1,411 were males, and 1,410 females, being 100·1 boys to 100 girls.

From Table VII. it appears that of the children born in Ulster, 3·8 per cent. were illegitimate; in Leinster, the percentage was 3·1; in Munster, 2·1; and in Connaught, 0·7.

TABLE VII.—Showing the Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1903-1913 by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

In the provinces the rates represented by the total births registered during the year 1913 were as follows:—Leinster, 23·3 per 1,000 of the population in 1911; Munster, 22·0; Ulster, 23·3; and Connaught, 21·8.

The county or county borough areas which had the highest birth-rates, were—Dublin county borough, 31·2; Belfast county borough, 27·9; Limerick county and county borough, 25·0; Mayo county, 23·3; Londonderry county and county borough, 22·7; and Kerry county, 22·6. The counties having the lowest rates were—Dublin county, 18·0; Clare, 19·0; Wicklow, 19·7; Tipperary N.R., 19·8; Monaghan, 19·8; and Westmeath, 19·9.

Of the total births, 520 per cent. were registered in the first six months of the year (181 days), and 48.0 per cent. in the second six months of the year (184 days).

The total number of births registered in the first quarter of the year was 25,486; in the second, 26,578; in the third, 24,698; and in the fourth, 23,334.

In the following table particulars are supplied concerning Multiple Births in Ireland for a period of 6 years.

MULTIPLE BIRTHS IN IRELAND IN EACH OF THE YEARS 1908-1913.

Year.	Total Births.	Twin Births.	Triplets.	Quadruplets.	Twin Births—per cent. of		
					Total Births.	Single Births.	Total Mothers.
1908	102,639	1,198	10	—	1.174	1.203	1.188
1909	103,759	1,301	17	—	1.169	1.197	1.183
1910	101,963	1,128	13	—	1.106	1.132	1.119
1911	101,758	1,266	10	—	1.244	1.276	1.260
1912	101,088	1,362	6	—	1.249	1.281	1.265
1913	100,094	1,272	7	—	1.271	1.304	1.287

From the above it will be seen that during the year 1913, there were registered 1,272 twin births, and 7 triplets; and that the twin-births were 1.271 per cent. of the total births, 1.304 per cent. of the single births, and 1.287 per cent. of the total mothers.

DEATHS.

There were 74,694 deaths registered in Ireland during the year 1913, equivalent to 1 in 58.6, or 17.1 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 37,512, and those of females to 37,182, the rate for males being 17.2 per 1,000, and for females 17.0 per 1,000.

The death-rate (17.1) is 0.6 above that for the year 1912, but 0.1 below the average rate for the ten years, 1903-1912.

As in previous years, many of the Registrars have supplied useful notes in their Quarterly Returns relating to the sanitary condition of their respective districts. These notes were published in the Quarterly Reports issued from this Department, and it is desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

For the provinces the recorded death-rates are as follows:—Connaght, 14.0; Munster, 16.2; Ulster, 17.6; and Leinster, 18.4 per 1,000 of the population, according to the Census of 1911.

The counties having the lowest mortality rates per 1,000 of the population are:—Leitrim county, 12.9; Mayo county, 13.3; Kerry 13.6; and Clare, 14.3.

The counties or county boroughs with the highest rates are as follows:—Dublin county borough, 23.1; Armagh county, 18.9; Kilkenny, 18.5; and Wexford, 18.5.

The deaths registered in the first half of the year, as observed in previous reports, generally out-number those registered in the second half, the deaths registered in the six months of 1913, January to June inclusive, being equivalent to 55.9 per cent. of the total for the year, and those in the remaining six months 44.1 per cent.

The annual rates represented by the deaths registered in each quarter are as follows:—19·9 per 1,000 of the population for the first quarter; 18·2 for the second; 15·0 for the third; and 13·1 for the fourth. The rate for the first quarter is 0·3 below the second 9·2 above, the third 0·7 above, and the fourth 1·1 below the average rate for the corresponding quarters in the ten years, 1903-1912.

As will be observed from the table on pp. 140-141, of the 74,894 deaths registered during the year, 3,770 took place in *Infirmaries and General and Special Hospitals*; 1,582 in *Public Lunatic Asylums*; 10,193 in *Workhouses and Workhouse Hospitals*; and 59,169 were of persons who died "At their Own Homes, &c."

Of the total deaths registered in Ireland, 5·0 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 0·8 in Connaught to 10·3 in Leinster. Deaths which took place in the Workhouses or Workhouse Hospitals, constituted 13·6 per cent. of the total deaths, the respective percentages of these deaths for the provinces being—Leinster, 15·6; Munster, 18·8; Ulster, 10·2; and Connaught, 9·9.

TABLE VIII.—Showing by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1903-1913, and the average number for the ten years, 1903-1912.

CAUSES OF DEATH.

The causes of death have been arranged in conformity with the International Nomenclature of Diseases and causes of death, as in the two years, 1911 and 1912.

STATEMENT showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1912 and 1913, with the annual average number for the ten years, 1903-1912.

CAUSES.	NUMBER OF DEATHS REGISTERED.			CAUSES.	NUMBER OF DEATHS REGISTERED.

Influenza,	1,154	1,226	1,310	Accidents of Pregnancy and Childbirth,	334	334	340

The preceding summary shows that deaths from whooping-cough were less by 427 than in the year 1912; deaths from diphtheria were 42 less; deaths from tuberculosis (all forms) were 50 less; deaths from cerebro-spinal fever were 7 less; deaths from pneumonia were 285 less; deaths from puerperal septic diseases were 22 less, and the mortality figures for accidents of pregnancy and childbirth were the same as in the year 1912. Deaths from the following diseases show increases for the year 1913 as follows:—enteric fever, 57; typhus, 14; measles, 107; scarlet fever, 50; influenza, 149; diarrhoea and enteritis of children under two years of age, 1,095.

The following diagrams and maps have been prepared to illustrate the leading features of Irish mortality during the year 1913.

- DIAGRAM NO. 1.—Showing the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years, 1894-1913, and by the number of Emigrants enumerated in the same years Facing Page v.
- " " 2.—Showing the comparative Mortality from twenty-two of the principal causes of Death in Ireland in 1913 xiii.
- " " 3.—Showing the number of Successful Primary Vaccinations to every 100 Births registered in Ireland, during each of the eight years, 1905-1912 xx.
- " " 4.—Showing the death-rate from Tuberculosis in Ireland, as compared with England and Scotland, during each of the forty-nine years, 1864-1913, xxiii.
- MAP 1.—Showing the rates per 1,000 of the population represented by the number of deaths from all Forms of Tuberculosis in the Counties and County Boroughs of Ireland, during the year 1913 xxvi.
- MAP 2.—Showing the Infant Mortality in Ireland, by Counties, for the year 1913, xxxix.

Enteric Fever.—As before stated, there was an increase of 57 in the number of deaths registered from enteric fever, namely from 232 in 1912 to 289 in 1913. Both these figures are, however, below the average for the preceding 10 years, namely 371. The deaths in 1913 are equal to a rate of 0·07 per 1,000 of the population of Ireland estimated to the middle of the year. Of the deaths, 170 were of males, and 119 were of females. Forty-three deaths were registered in the unions containing Dublin county borough (*i.e.*, 13 in Dublin North Union, and 30 in Dublin South Union); 15 in Limerick Union; 23 in Lisburn Union (including 19 belonging to Belfast county borough); 11 in Newry Union, and 10 in Omagh Union.

TABLE XL.—Showing, for the year 1913, the number of deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

Typhus.—Deaths from typhus rose from 34 in the year 1912 to 48 in the year under notice, the average for the 10 years preceding being 58. Of the total, 32 were deaths of males and 16 were deaths of females. There were 13 deaths in Dublin county borough, (7 in North Dublin Union, and 6 in South Dublin Union); there were also 6 deaths in Stranorlar; 4 in each of Ballina and Cork; 3 in each of Newcastle and Oughterard; 2 in each of Carrick-on-Shannon, Castlebar, Castlereagh and Loughrea; and one death from typhus occurred in each of the following unions:—Boyle, Clones, Galway, Glennamaddy, Limerick and Scarriff, and one in Lisburn Union appertaining to Belfast county borough.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes; from some during each of the eleven years, 1903-1913, with the Average Annual Number for the represented by the number of deaths from these causes, and the percentage of

Small-pox.—During the year no report regarding the presence of small-pox reached the General Register Office.

DECLINE IN VACCINATION.

In the report on the vaccination of children whose births were registered in the year 1912, it appears that since the year 1905 the successful vaccinations have declined from 82 per cent. of the births registered in that year, to 66·3 per cent. of the births registered in the year 1912.

It cannot be too strongly stated that an unvaccinated community is in a constant condition of danger, and that vaccination with pure lymph, with ordinary precautions, is practically innocuous.

The following particulars should be ascertained regarding all persons suffering from small-pox :—

1. If there is no evidence of vaccination.
2. If vaccinated in infancy only—number of scars.
3. If vaccination is performed only after infection by small-pox.
4. If stated to be vaccinated, but no scars visible.
5. If re-vaccinated, the date of re-vaccination, if possible.

The following table gives the number of deaths from small-pox, and the number of primary vaccinations reported by the Registrars in their quarterly returns for each of the years 1882-1913.

Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.
1882	120	105,613	1892	1	88,685	1902	6	91,970
1883	10	105,561	1893	72	107,204	1903	5	89,394
1884	1	105,021	1895	140	92,927	1906	-	90,171
1885	4	102,680	1896	4	88,527	1907	1	89,207
1886	2	97,137	1897	5	89,732	1908	-	88,576
1887	14	96,593	1898	-	87,169	1909	-	86,795
1888	3	95,320	1899	1	84,927	1910	-	88,906
1889	-	91,921	1900	1	91,150	1911	-	94,681
1890	-	90,598	1901	2	88,880	1912	-	77,374
1891	7	92,267	1902	1	94,303	1913	-	97,607
1902	-	89,567	1903	40	95,933			

It appears that no death from small-pox has been recorded in Ireland during the 6 years ending with 1913.

In the following table particulars are given with respect to the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1912, with their percentage to the total Births registered during each year :-

Year.	Successful Vaccinations (Form A, First Schedule).		Vaccinations Postponed (Form B, First Schedule).		In respect of Vaccines Disease (Gubinate &c).				Ref. before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defectives who have not been granted an exemption of (Form C, First Schedule).		Total Births Registered.	
	Number.	Percentage.	Number.	Percentage.	On the ground of conscientious objection of the Vaccine Refuser.		In respect of the children having already had Small-pox.		Number.	Percentage.	Number.	Percentage.	Number.	Percentage.	Number.	Percentage.
					Number.	Percentage.	Number.	Percentage.								
1904	61,308	81.0	1,384	7.1	128	0.1	2	0.0	7,198	9.6	3,754	5.0	6,580	9.3	103,521	100.0
1905	61,376	82.6	1,585	7.4	30	0.1	-	-	6,681	9.3	3,825	5.1	5,961	8.0	103,522	100.0
1906	61,522	80.4	1,595	7.1	128	0.1	-	-	6,553	8.7	4,229	5.6	6,428	8.7	103,586	100.0
1907	61,841	80.4	1,520	7.1	38	0.1	-	-	6,658	8.6	3,557	4.7	7,326	7.1	103,732	100.0
1908	60,584	78.9	1,611	7.8	36	0.1	-	-	6,505	8.7	3,297	4.3	5,513	6.6	103,598	100.0
1909	61,184	79.6	1,735	7.6	128	0.1	-	-	6,602	8.6	3,354	4.4	5,636	6.7	103,729	100.0
1910	58,569	77.3	1,764	7.7	38	0.1	-	-	6,699	8.6	3,264	4.3	5,693	6.7	103,583	100.0
1911	58,568	75.6	1,799	7.6	51	0.2	-	-	6,694	8.6	4,448	5.8	6,386	7.6	103,725	100.0
1912	60,598	82.3	1,713	7.3	31	0.1	-	-	6,776	8.7	3,313	4.3	5,174	5.5	103,505	100.0

From this it appears that successful vaccinations, which were 81 per cent. of the births registered in 1904, rose to 82 per cent. for 1905, declined to 80.4 per cent. for each of the years 1906 and 1907, to 78.9 per cent. for the year 1908, to 78.3 per cent. for the year 1909, further declined to 77.3 per cent. for the year 1910, and again for the year 1911 to 75.6 per cent., and in the year under notice to 82.3 per cent.

These facts are graphically shown for the years 1904-1912 in Diagram No. 3 facing this page.

During the year 1913 there was no report of death from vaccinia or from any other effect of vaccination.

Measles.—There was an increase in the mortality from measles from 813 deaths in the year 1912 to 920 in the year 1913, the average being 639. The deaths represent a rate of 0·21 per 1,000 of the population. Of the deaths 470 were of males and 450 of females. Among the unions deaths from this disease were registered as follows:—185 in Belfast; 80 in Newry; 53 in Wexford; 43 in Carrick-on-Shaw; 38 in Tralee; 33 in Waterford; 31 in Kildush; 27 in South Dublin; 26 in Galway; 25 in Cork; 24 in Londonderry; 22 in Dingle; 20 in Monaghan; 20 in Banbridge; 18 in Enniscorthy; 15 in Carlow; 14 in Bandon; 14 in Castleblayney; 12 in Dundalk; 11 in Tullamore; 11 in Arrangh; 11 in Ennis; and 10 in each of the unions of Callan and New Ross.

Scarlet Fever.—An epidemic of scarlet fever prevailing in Belfast accounted for the 164 deaths (67 of the latter having occurred in the Union of Lishurn) out of a total figure for the whole of Ireland of 358 deaths, representing an annual rate of 0·08 per 1,000, as compared with a rate of 0·07 per 1,000 in the year 1912, and an average rate of 0·04 for the 10 years 1903-12. The total for the year 1913 includes the deaths of 164 males and 194 females. Thirty-one deaths from scarlet fever were registered in the union of South Dublin, and 16 in the union of Kildush.

Whooping-cough.—Excepting the year 1906 (of the past decade), the period under notice had the lowest mortality from whooping-cough, the figures being 581 and 618 respectively, and the average for the ten years (1903-12) 1,021 deaths. The deaths in 1913 represent an annual death rate of 0·14 per 1,000; of the total deaths there were 288 males and 330 females. Deaths from whooping-cough occurred in certain unions as follows:—in the two unions containing Dublin county borough, 87 deaths, including North Dublin, 30 deaths, and in South Dublin, 57 deaths; in Belfast, 53 deaths; the same in Galway; in Waterford, 38 deaths; in Rathdrum 23 deaths; in Thurles, 20; in Listowel, 16; in Coleraine, 15; in Cashel, 14; in Carlow, 13; in Rathdown, 13; in Ballymena, 12; in Fermoy, 12; in each of Mountmellick and Westport, 11; and in each of Drogheda and Loughrea, 10 deaths.

Diphtheria.—Unlike measles and scarlet fever, there was a decline in mortality from diphtheria in 1913 as compared with the preceding year, and with the average for the 10 years 1903-1912, the figures being 309, 351, and 347, respectively. The deaths are equal to an annual rate of 0·07 per 1,000. This is the lowest rate for diphtheria, since the year 1907, when a rate of 0·06 was recorded. In each of the following unions 10 or more deaths from diphtheria were registered:—In North Dublin Union, 11, and in South Dublin Union, 78; in Belfast, 16; in Lisburn, 56, (including 41 belonging to Belfast county borough) and in Naas Union 13 deaths from diphtheria were registered. There were 70 deaths attributed to croup, regarding which further information could not be obtained.

Influenza.—The number of deaths from influenza amounted to 1,174. Of this number 553 were of males and 619 were of females, the total being equal to an annual rate of 0·27 per 1,000 of the estimated population of the country.

A table on page xxii gives the figures and death-rates for Ireland by provinces and counties; in Leinster the rate was 0·27 per 1,000; in Munster, 0·15; in Ulster, 0·33; and in Connaught, 0·24 of the respective census populations of these areas. In Leinster Queen's County had the highest rate—namely, 0·44; in Munster the North Riding of Tipperary recorded the rate of 0·27; in Ulster 0·59 was recorded in the county of Donegal—the highest county rate in Ireland; and in Connaught the highest rate was 0·57 for the county of Sligo.

Diarrhoea and Enteritis of children under 2 years.—The mortality from diarrhoeal diseases, of young children under 2 years of age, for the year under notice is represented by a rate of 0·46 per 1,000, the actual number of such deaths registered being 1,992; in the preceding year the number was 897, and the average for the 10 years 1903-1912 is 1,314. Of the total 1,992 there were 459 registered in Belfast Union; 229 in North Dublin Union, 325 in South Dublin Union; 150 in Cork Union; 60 in Londonderry; and 50 in Waterford, and only 14 in Limerick.

Other Epidemic Diseases.—There were 6 deaths from mumps, 3 deaths from German measles, and 4 deaths from varicella, included under this heading.

Syphilis.—The deaths assigned to syphilis numbered 87. Of this number 58 were deaths of males and 29 were deaths of females. Of the total 87, there were 56 deaths of infants under one year. In the year 1912 the deaths attributed to syphilis were 99 in number, of males 49 and of females 50, and the deaths of infants under one year of age numbered 64.

POLIOMYELITIS—INFANTILE PARALYSIS.

The following table gives the deaths, by ages and sexes, returned as having been caused by the above conditions during the year 1913.

	All Ages	Under 1 year	1-	2-	3-	4-	5-	6-	7-	8-	9-	10-	11-	12-	13-	14-	15-	16-	17-	18-	19-	20-
Males ...	30	2	3	4	2	2	4	-	-	-	-	1	-	-	1	-	-	-	-	-	-	1
Females ...	30	2	1	3	1	-	1	-	-	1	-	-	-	-	-	-	-	-	-	1	-	-
Total ...	30	4	4	7	3	2	5	-	-	1	-	1	-	-	1	-	-	-	-	1	-	1

It appears from the above table that the number of deaths of males was just double that of females, and that out of a total of 30 deaths, 25 were of children under 6 years of age.

Pneumonia.—The total figure for deaths from all forms of pneumonia was 3,948. This figure represents an annual death-rate of 0.90 per 1,000 of the estimated population; in the year 1912 deaths from pneumonia numbered 4,233.

Of the deaths in 1913, the males numbered 2,266 and the females 1,682. The total deaths from pneumonia include 1,504 deaths from broncho-pneumonia, 345 from lobar pneumonia, and 2,099 deaths from pneumonia not otherwise defined.

Erysipelas.—Seventy-four deaths from erysipelas were registered. of males 43, and of females, 31.

Pyæmia, Septicæmia.—Pyæmia caused 20 deaths, of males 9, and of females, 11; of 163 deaths from septicæmia, 42 were of females, of whom 13 were between the ages of 15—55 years.

Other General Diseases.—The last record of mortality from rabies in Ireland was in the year 1898, when 4 such deaths were registered. Since then there has been no mortality from this disease.

Thirty-three deaths were attributed to tetanus, and 3 to mycosis.

TUBERCULOSIS.

The total number of deaths from Tuberculosis registered in the year 1913 was 9,387, being 30 less than the number registered in the preceding year. This number is equivalent to a rate of 2.14 per 1,000 of the population of Ireland estimated to the middle of the year. The rate for the year 1912 was 2.15 per 1,000.

Reviewing the mortality statistics of Tuberculosis for the half century from the foundation of this Department to the close of the year 1913 as delineated on Diagram No. 4 facing this page, it is seen that the rate of 2.4 per thousand recorded in 1864 was repeated four times during that period. On the first occasion it mounted within three years to 2.6, falling again to 2.4, at which figure it stood for two years. Again it mounted to 2.6, which rate occurs six times in the first fifteen years, during which the rate fluctuated between 2.4 and 2.6. In the next thirty years (1879 to 1908 inclusive) only on one occasion did the rate fall below 2.6. It went to 2.5 in the year 1881. It was down to 2.6 on five occasions, and rose to 2.9 for a similar number of years. The last occasion on which this, the highest figure, was reached was in the year 1904. In the three years following it stood at 2.7, and has fallen consistently from the year 1907, when it was 2.7, to the year under review, with a rate of 2.14.

Many causes have contributed to this reduction. The education of the people through the Women's National Health Association, Lady Dudley's Nursing Scheme, the improvement in the Urban and Rural labourers' dwellings, the early isolation of infected persons, and the establishment of Sanatoria are all factors in the general improvement. There are, however, causes which are still tending to keep the rate for the country at a higher figure than it should show, the chief of which is, the immigration of diseased persons who having left the country in health and strength but sent home when diseased, tend to spread the infection and increase the apparent death rate of the country from this malady.

The following notes taken from the Registrars' Quarterly reports show how these matters are affecting the general health of the country:—

"I find the local branch of the Women's National Health Association a constant and unfailing source of help in every way. The Nurse who has been appointed to the district is unsparing in her efforts, which are keenly appreciated by the poor."

"Tuberculous disease appears to be on the wane, largely due to better housing and a more intelligent conception of the infectivity of the disease."

"One case of pulmonary tuberculosis. Patient came from America to die."

"A few cases of pulmonary tuberculosis—returned American emigrants."

"Two deaths were caused by pulmonary tuberculosis. Those patients lived in insanitary houses. The prevention of this disease can be best accomplished by better housing of the people, their using more home-grown food, and being more attentive to laws of hygiene. The removal of patients to sanatoria and after a few weeks allowing them home to the former surroundings is very futile and not inexpensive."

"There is a diminution of deaths due to tuberculosis. There has been an unusual number of large windows put into the dwelling-houses in this district. The people are now recognising the importance of more light and air."

"Four deaths of persons from tuberculosis; three pulmonary, one of whom took the disease from his brother who returned from the U. S., America."

"A girl of 24 years of age died of acute pulmonary tuberculosis, contracted evidently in Wales, where she lived for a considerable time, returned to the district and died after a few weeks at home."

"The residents of this district are getting to understand the value of ventilation."

"One of the phthisical cases was a case of miner's phthisis contracted in South Africa."

"Sanitation conspicuously improved."

"No death from consumption to record. This disease seems to get a great checking in this district compared to old times, thanks to sound advice, &c."

"There ought to be some provision made for cases of tuberculosis which are considered incurable."

"The Jubilee nurse is doing good work in the district."

"Sanitation progressive, a marked improvement being everywhere observable in the dwellings in regard to cleanliness, light, and ventilation."

The following tabular statement shows the total number of deaths from all forms of tuberculous disease in Ireland for each of the years, 1904-1913, with the rates per 1,000 of the population represented thereby the decrease in the number of deaths as compared with the previous year, and the percentage of such decrease.

Years.	All forms of Tuberculous Disease.			
	Total Number of Deaths.	Rate per 1,000 of population.	Decrease.	
			Number.	Per cent.
1904,	12,604	2.38	—	—
1905,	11,882	2.70	812	6.4
1906,	11,756	2.47	126	1.1
1907,	11,679	2.46	77	0.7
1908,	11,393	2.56	386	3.3
1909,	10,594	2.41	699	6.2
1910,	10,016	2.28	578	5.5
1911,	9,823	2.30	393	3.9
1912,	9,437	2.10	186	1.9
1913,	9,387	2.14	50	0.5

From this it appears that the deaths from all forms of tuberculosis numbered 12,604 in the year 1904, and that in the year 1913 the number was 9,387, showing a difference of 3,307 deaths between these years, which difference represents a decrease of more than 26 per cent. in 1913 when compared with the year 1904.

In the following table is shown by provinces, counties, and county boroughs the number of deaths from all forms of tuberculous disease registered during the year 1913, also the mortality from these causes after correction for deaths in institutions.

Table showing by Provinces, Counties and County Boroughs the number of deaths from all Forms of Tuberculous Disease during the year 1913, with the death-rates per 1,000 of the population.

[Deaths in Institutions throughout Ireland have been assigned, as far as practicable, to the Counties or County Boroughs from which the deceased persons were admitted].

In the year under review, of the 9,387 deaths registered from tuberculosis (all forms) 4,672 were of males, and 4,715 were of females, showing an increase of 3 deaths in the province of Leinster, a decrease of 22 deaths in Munster, a decrease of 3 in Ulster, and a decrease of 23 in Connnaught. In diagram 2, opposite page xiii, it may be seen that among the principal causes of death tuberculosis is the second, its column standing between old age, the highest, and heart disease, the third highest, cause of death. In diagram 4, opposite page xxiii, the death rates from tuberculosis in England and Wales, in Scotland and in Ireland, are compared since the year 1864. In the year 1912, the rate in Ireland was 2·15, in Scotland, 1·72, and in England 1·37 per 1,000 of the respective estimated populations of the three countries.

In the following table the numbers and death-rates per 1,000 of the population for all forms of tuberculous disease and for pulmonary tuberculosis are given for the years 1903-1913, with annual averages for these years:—

TABLE showing the number of Deaths from all forms of Tuberculous Disease registered in Ireland during the Years 1903-1913, with the number of Deaths from Pulmonary Tuberculosis and the respective rates per 1,000 of the population, represented thereby.

Years	Deaths from all forms of Tuberculous Disease.		Deaths from Pulmonary Tuberculosis	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.
1903.	12,180	2.76	9,559	2.16
1904.	12,484	2.88	9,833	2.23
1905.	11,582	2.70	9,216	2.19
1906.	11,766	2.67	8,933	2.08
1907.	11,679	2.66	8,828	2.01
1908.	11,293	2.58	8,511	1.94
1909.	10,594	2.41	8,051	1.84
1910.	10,016	2.28	7,527	1.72
1911.	9,625	2.20	7,364	1.73
1912.	9,437	2.15	7,452	1.70
Averages, 1903-1911.	11,115	2.53	8,549	1.90
1913.	9,387	2.14	7,366	1.68

The high death-rate from all forms of tuberculous disease of 2.88 per 1,000, was reached in the year 1904; since that year there has been a gradual decline to a death-rate of 2.14 per 1,000 in the year now under notice.

On reference to the abstract of diseases by sexes and age-periods for the whole of Ireland it may there be seen that the total deaths from tuberculosis were returned as follows:—From pulmonary tuberculosis 4,245—deaths of males 2,139, and of females 2,106; from phthisis 2,673—deaths of males 1,272, and of females 1,401; from tuberculosis (not defined), 236—of males 117, and of females 119; from acute phthisis 174—of males 77, and of females 97; from acute miliary tuberculosis 38—of males 11, and of females 27. The deaths from the foregoing causes, numbering 7,366, are all grouped under the general heading "pulmonary tuberculosis." From tuberculous meningitis the deaths were 827—of males 347, and of females 280; from tabes mesenterica 92—of males 41 and of females 51; from tuberculous peritonitis 255—of males 122, and of females 133; from other forms of abdominal tuberculosis 176—of males 80, and of females 96; from tuberculosis of the spinal column 130—of males 63, and of females 67; from tuberculosis of joints 161—of males 90, and of females 71; from lupus 9—of males one, and of females 8; from scrofula 7; from tuberculosis of other organs 140; and from disseminated tuberculosis 424—of males 240, and of females 184.

Pulmonary Tuberculosis.—Deaths from pulmonary tuberculosis amounted to 7,366, of males 3,616, and of females 3,750, these figures correspond to the following rates:—1.68 and 1.65, and 1.71 per 1,000 of the respective populations. In the year 1912, the total number of deaths from pulmonary tuberculosis was 7,452, of males 3,871, and of females 3,581; these figures correspond to the following rates:—1.70, 1.68 and 1.72, respectively.

In the following table the deaths and death-rates from pulmonary tuberculosis are presented by sexes and age periods.

Age-Periods.	Deaths from Pulmonary Tuberculosis in Ireland.					
	Total of both Sexes.		Of Males.		Of Females.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.	Number.	Rate per 1,000.

55-65 ..	437	1.52	244	1.78	193	1.27
65-75 ..	157	0.80	89	0.62	68	0.40
75 and upwards, ..	22	0.17	11	0.18	11	0.17
Total all ages, ..	7,393	1.68	3,614	1.65	3,779	1.71

From this table it appears that the highest death rate from pulmonary tuberculosis, for both males and females, was between the ages 25 and 35 years; for both sexes it was 3.07 per 1,000, for males 3.04 per 1,000, and for females 3.1 per 1,000.

The period 20-25 years succeeds with a rate of 2.88 per 1,000 of the population at those ages, followed by the period, 35-45 years the deaths at which were equivalent to 2.67 per 1,000, while the deaths among persons 45 and under 55 years of age were represented by a rate of 2.15 per 1,000.

Taking the deaths from pulmonary tuberculosis among persons 15 and under 45 years of age, numbering 5,325, it will be observed that they constitute more than 72 per cent. of all the deaths from that disease.

The following table gives for the Dublin Registration Area the mortality from tuberculous disease among the several social classes for the year 1913, as derived from the Registrar-General's Yearly Summary of the Weekly Returns:—

Class.	Occupation or Social Position.	Annual Rate for the Dublin Registration Area, per 1,000 of the Population in 1911 represented by the Deaths registered in 1913 from		
		All Forms of Tuberculous Diseases.	Pulmonary Tuberculosis.	Other Forms of Tuberculous Disease.

Cancer.—The year 1913 is marked by another advance in the number of victims to the various forms of malignant disease classified under the heading "cancer," and include deaths from carcinoma, sarcoma, cancer, and malignant disease. Such deaths numbered 3,900, which is the highest figure recorded in Ireland; in the year 1912 deaths from cancer amounted to 3,734.

There were 1,847 deaths of males and 2,053 of females; the above figures correspond to the following rates per 1,000:—0.85 and 0.94, respectively. In table XV., it may be seen that for both sexes the rate of mortality increases largely after the 55th year, for males it increased from 16.29 per 10,000, between the ages of 45-55, to 34.51 per 10,000 between the ages of 55 and 65; and among females it increased from 29.5 per 10,000 between the ages of 45 and 55, to 34.90 per 10,000 (the highest rate for females) between the ages of 55 and 65 years. In the course of the classification of causes of death, queries were sent out asking for further information which caused 81 deaths being transferred from other causes of death to that of cancer.

Table xv on page xxxi. shows the deaths from cancer by age and sex arranged according to the parts of the body which were affected.

The parts affected by the tumours (not including those of the brain, uterus, or ovary), which caused the deaths of 20 males and 32 females during the year 1913, were as follows :—In all these cases the tumours were not malignant, neither was further information concerning their nature available.

Statement showing the parts affected by the Tumours which caused the deaths of 20 males and 32 females

Parts affected.	Males.	Females.	Parts affected.	Males.	Females.

Rheumatism.—The deaths from rheumatic affections numbered 654, namely, from acute rheumatism, 130 deaths, of males 67 and of females 63 deaths; from rheumatic arthritis 84 deaths, of males 25 and of females 59 deaths; from rheumatism of heart, 53 deaths; from chronic rheumatism 388 deaths, of males 169 and of females 219 deaths.

Gout.—There were 8 deaths from gout, and 11 deaths from rheumatic gout.

Diabetes.—Of 416 persons who died from diabetes, 230 were males and 186 were females; in the preceding year the corresponding figures were 393, 219 and 174.

Alcoholism.—The number of deaths directly stated to be caused by alcoholism was 133 as compared with 132 in the year 1912. Of the deaths there were 116 males and 17 females. In 13 instances the deaths were connected with accidents or negligence. As in the preceding year 272 deaths were assigned to cirrhosis of the liver. There were moreover 2 deaths assigned to acute alcoholic poisoning, in the course of classification of deaths.

Meningitis.—To meningitis, or inflammation of the brain, the deaths of 632 persons have been assigned; these deaths correspond to an annual rate of 0·14 per 1,000 of the population. Of the total deaths 354 were males and 278 were females.

The deaths of 16 persons were classified under the heading of cerebro-spinal fever, of these 11 were returned as from cerebro-spinal meningitis, and no further information was obtained by inquiry.

General Paralysis of the insane.—The deaths of 100 persons were caused by general paralysis of the insane; of this number, 77 deaths were of males and 23 were of females.

Epilepsy.—Of 276 deaths from epilepsy, 143 were of males and 133 were deaths of females.

Convulsions.—Under this title there were registered 1,190 deaths, of this total 950 were deaths of infants under one year and 149 were between the ages of one year and 2 years. The use of the term convulsions as a primary cause should be avoided, if possible, as convulsions are only symptomatic of the true cause of death. The deaths of infants under one year returned as from convulsions are 9·8 per cent. of the total deaths of infants under one year registered from all causes.

Locomotor Ataxy.—Thirty-five deaths from locomotor ataxy were recorded during the year: of this number, 30 were deaths of males and 5 were of females.

Tumour of Brain.—Under this title the deaths are classified which cannot be assigned to the disease causing the tumour. All deaths returned as from tumour of brain are queried, and if the reply is satisfactory, the death is placed under its proper title. During the work for the year under notice, 41 queries were sent out for tumour of brain: of these, 15 were answered, and of the latter, 5 were assigned to tuberculous meningitis, 4 to sarcoma, and 3 to syphilis.

There were 42 deaths remaining returned as from tumour of brain not otherwise defined.

Diseases of the Heart.—The mortality from diseases of the heart is more than 10 per cent. of the mortality from all causes; the deaths numbered 7,919, and represent a rate of 1·81 per 1,000 of the population of Ireland estimated to the middle of the year. After old age and tuberculosis, disease of the heart is the principal cause of death, as may be seen in Diagram 2 opposite page xiii. Among the deaths from diseases of the heart, these were 27 from pericarditis, 23 from infectious endocarditis, 238 from fatty degeneration, 90 from angina pectoris, and 2,570 from valvular disease.

Laryngitis.—There were 109 deaths from laryngitis and 18 from laryngismus stridulus.

Bronchitis.—The total number of deaths from bronchitis was 6,576, which number corresponds to a rate of 1·50 per 1,000. The total is 8·8 per cent. of all deaths registered during the year 1913. Bronchitis is the fourth principal cause of deaths in Ireland. See diagram, opposite page xiii.

Pleurisy.—There was a decrease of 8 in the number of deaths which were directly attributed to pleurisy, from 174 in the year 1912 to 166 in the year 1913. Of the deaths in 1913, 92 were of males, and 74 were of females.

During the 10 years from 1904 to 1913, the deaths of 277 persons were reported as being directly caused by empyema. These deaths having been made the subject of special enquiry, were transferred to their specified causes in the following table in such cases as farther information became available.

Table showing for the years 1904-1913, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 277 persons (203 males and 74 females) were associated.

Diseases or causes (by Age-Periods) with which 203 Deaths of Males from Empyema were associated.

Of the 277 deaths registered as from empyema (not otherwise defined), during the period 1904-1913 (inclusive), the deaths of 89 persons were stated to be associated with tuberculous disease, 66 of these being of males and 23 of females. In 116 instances further information was not forthcoming.

Gastric ulcer.—The number of deaths caused by gastric ulcer was 308—of males 145 and of females 163. In the year preceding, the deaths from this condition numbered 312, of males 151 and of females 161.

Duodenal ulcer.—The certified copies gave particulars of the deaths of 44 persons from duodenal ulcer. Of this figure 33 were deaths of males and 11 of females.

Appendicitis and Perityphlitis.—There were 215 deaths from these diseases. Of the 215 deaths, 123 were of males and 92 were of females. In the year 1912, there were 180 deaths from the above causes.

Cirrhosis and other diseases of the liver.—As in the year 1912 the deaths from cirrhosis of the liver numbered 272, of this number 193 were of males and 79 were of females. There were 47 deaths from gall-stones, 11 from malignant jaundice, and 187 deaths from other diseases of the liver.

Peritonitis.—As is the custom, all the deaths from peritonitis were inquired into regarding the cause of that condition. Of 173 deaths originally returned as peritonitis, 83 were finally classified to a more definite cause, e.g., 16 to appendicitis, 11 to gastric ulcer, 11 to tuberculosis, 9 to obstruction of intestines, 5 to accidental violence, 5 to diseases of uterus, 4 to cancer, 4 to intestinal ulceration, and 4 to diseases or accidents of pregnancy and childbirth.

Diseases of the kidneys.—There were 1,821 deaths from diseases of the kidneys, of males 992 and of females 829. The total includes 431 from acute nephritis, 1,247 deaths from chronic Bright's disease, 78 deaths from uræmia, and 65 deaths from other diseases of the kidney, in all equal to an annual rate of 0.42 per 1,000.

Diseases and accidents of pregnancy and childbirth.—The women who died from puerperal septic conditions numbered 183, corresponding to a mortality rate among mothers of 1.93 per 1,000 births registered. There were 53 deaths from accidents of pregnancy, 104 deaths from puerperal hæmorrhage, 118 deaths from other accidents of childbirth, 7 deaths from puerperal albuminuria, 40 deaths from puerperal convulsions, 12 deaths from puerperal insanity, making a total of 334, corresponding to a mortality rate of 3.33 mothers to every 1,000 births registered. Another source of mortality connected with pregnancy and childbirth, namely, that which is complicated with pre-existing or co-existing disease, to either of which latter the death is assigned in the process of tabulation. Such deaths are, however, classified separately so that they can be incorporated in a special table (XIII), which shows the total mortality connected with the puerperal condition, namely:— (1) mortality from septic conditions, (2) mortality from intrinsic puerperal causes, and (3) mortality from pre-existing disease or condition complicating pregnancy and childbirth.

TABLE XIII.—Deaths of Women in Ireland in 1913 definitely returned as either caused by or associated with Pregnancy or Childbearing.*

* These deaths are included in the general tables of Cause of Death.

The number of deaths of women which occurred during pregnancy or childbirth, is shown in the following table for each of the years 1903-1913, under the circumstances before-mentioned, and also the rate per 1,000 births registered during each of these years, with an average rate for the 10 years, 1903-1912:—

Years.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.
1903,	233	2.29	340	3.34	573	5.63	84	0.82	657	6.45
1904,	216	2.08	357	3.54	573	5.62	90	0.95	663	6.57
1905,	227	2.21	346	3.35	573	5.57	83	0.81	656	6.38
1906,	234	2.26	373	3.60	607	5.86	69	0.67	676	6.53
1907,	163	1.60	342	3.36	505	4.96	84	0.83	589	5.79
1908,	189	1.86	341	3.34	530	5.20	85	0.83	615	6.03
1909,	222	2.16	359	3.30	581	5.46	83	0.81	664	6.27
1910,	191	1.82	351	3.44	542	5.34	64	0.63	606	5.94
1911,	186	1.83	328	3.22	514	5.05	61	0.63	575	5.68
1912,	115	2.15	334	3.31	549	5.43	50	0.50	599	5.93
Average, 10 years, 1903-12	208	2.03	346	3.38	554	5.41	76	0.75	630	6.16
1913,	153	1.93	334	3.33	527	5.26	58	0.58	585	5.84

The table shows that the number of deaths (585) associated with pregnancy and childbirth was 14 below the number registered in the year 1912, and 45 under the average for the 10 years, 1903-1912. The rates per 1,000 births corresponding to the total figures for the year 1913, the year 1912, and the average for the 10 years, 1903-12, were 5.84, 5.93, and 6.16 respectively.

Violence.—Under this heading are grouped deaths by suicide, accident, homicide, and execution, and such deaths in 1913 numbered 1,871, including 155 deaths by suicide (of males 121, and of females 34), by accidental violence 1,672 (of males 1,099, and of females 573), and by homicide 44 (of males 30, and of females 14). There was no death by execution.

Of the principal causes of death by accidental violence, there were 495 deaths by traumatism, 281 by burning (of this figure 191 were of children under 5 years of age), 286 were by drowning, 82 were by absorption of deleterious gases, 46 were by excessive cold, and 8 were by effects of heat; there were 23 deaths from acute poisoning, 5 being due to poisoning by food, and 18 by other acute poisonings, and 24 deaths resulted from injuries by animals.

The particulars regarding deaths by poisoning are given in Table XVI. page xxxvii.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

The following terms should not be used for denoting the cause of death where it is possible to employ a more definite cause:—Droopy, syncope, sudden death, heart failure, atrophy, debility, marasmus, teething, pyrexia, croup, paralysis (without specified cause), old age.

UNCERTIFIED CAUSES OF DEATH.

The cases returned in 1913 as being uncertified (there having been no medical attendant during the last illness), were equivalent to 22.6 per cent. of all the deaths recorded. In the year 1909 such deaths were 24.3 per cent. of all deaths registered; in 1910, 24.3 per cent., in 1911 22.6 per cent., and in the year 1912 the percentage of uncertified deaths was 22.6. The percentage of uncertified deaths in the province of Leinster in the year under notice was 16.2, in Munster it was 25.4, in Ulster 17.5, and in Connaught 49.4 per cent. of all deaths registered.

The proportion per cent. of uncertified deaths in England and Wales in 1913 was 1.2, and in Scotland in 1911 it was 1.6.

INQUESTS.

There were 1,860 inquests returned by the Registrars during the year 1913, or one inquest in every 40 deaths registered.

AGES AT DEATH.

The following statement shows, by sexes, the mortality from all causes in Ireland during the Year 1913, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

SEXES.	Mortality from all causes per 1,000 Living at Ages—											75 years and upwards
	All Ages.	Under 5 Years.	5—	10—	15—	20—	25—	30—	35—	40—	45—	
MALES, ..	37.16	30.58	3.42	2.39	3.96	5.27	6.52	9.04	15.36	27.84	39.93	59.17
FEMALES, ..	10.90	34.45	3.72	2.05	4.75	5.62	6.09	9.43	14.93	26.93	35.16	51.71
TOTAL, ..	31.06	33.81	3.57	2.47	4.36	5.54	6.31	9.23	15.40	27.37	37.00	55.08

In the year 1913, of the deaths registered 14,693 were of children under 5 years of age, which number is equivalent to a rate of 33.81 in every 1,000 of the number living at that age. Of the deaths under 5 years of age, 8,122 were of boys and 6,571 of girls, representing respectively, 36.88 in every 1,000 boys, and 30.65 in every 1,000 girls, under the age of 5 years.

Persons aged 65 years and upwards whose deaths were registered are equivalent to 60.42 per 1,000 of the number of the living at that age, the rate for deaths at the age-period, 65-70 years, being 37.00 per 1,000; at the age-period 70-75 the rate was 54.98, and for deaths of persons aged 75 years and upwards it was 125.93 per 1,000 of the living at that age-period.

Of the total deaths registered 458 were of persons stated to have been aged 95 years or upwards—202 males and 256 females, including 109 (48 males and 61 females) who were returned as having been aged 100 years or upwards. Owing to the absence of public records for remote periods absolute verification of the ages of very old persons is not possible; but on secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

OCCUPATIONAL MORTALITY.

In the table on pages xlii. and xliii., as published in the Registrar-General's Yearly Summary of the Weekly Returns, the mortality in 1913 among the several social grades of the population of the Dublin Registration Area is shown.

From this table it will be seen that among the families of the Professional and Independent class the annual death-rate from all causes was 18.1 per 1,000 of the population in 1911; among the Middle class it was 15.1; among the Artisan class and Petty Shopkeepers the rate was 16.8; and among the General Service class it was 21.3 per 1,000.

INFANT MORTALITY.

Deaths of infants under one year of age registered in Ireland during the year 1913 numbered 9,721—males 5,528 and females 4,195. The total is equivalent to a rate of 97 per 1,000 of all births registered. In the year 1912 the infant mortality rate was 86 per 1,000 births, and the average infant mortality rate for the 10 years, 1903-12, was 94 per 1,000 births.

In England and Wales the infant mortality rose from 95 per 1,000 in the year 1912, to 109 in 1913; in Scotland it was 106 in 1912 and 116 in 1913; while in Ireland the respective rates were 86 and 97.

In the following table the infant mortality rate is given by sexes for "Civic" unions, i.e., unions containing towns which, in the year 1911 had a population of 10,000 or upwards, and for the remaining unions of Ireland; the rates at certain age-periods are also given in the table.

Table showing for Ireland, for Unions containing towns which, in 1911, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, with the proportion of deaths of infants by sexes at the undermentioned ages, per 1,000 births registered in the year 1913.

Unions.	MALES.				FEMALES.				TOTAL.			
	Under 3 months.	3-6 months.	6-12 months.	Under one year.	Under 3 months.	3-6 months.	6-12 months.	Under one year.	Under 3 months.	3-6 months.	6-12 months.	Under one year.
Total "Civic Unions."	30.3	27.4	32.5	141.5	30.6	23.2	22.3	115.1	30.2	25.4	28.0	128.6
Remainder of Ireland.	33.6	18.3	15.9	84.2	41.2	16.3	12.5	65.0	46.2	11.6	14.7	74.8
Total of Ireland.	31.5	19.2	23.3	108.6	44.8	15.0	21.3	85.7	37.4	17.4	22.3	90.1

From the foregoing table it would appear that for Ireland the infant mortality rate was 97.1 per 1,000, that in the "civic" unions it was 128.6 per 1,000, and that in the remaining unions of Ireland it was 74.8 per 1,000; in the year 1912 the figures for the "civic" and remaining unions were 115.2 per 1,000, and 66.5 per 1,000 respectively. Thus the infant mortality both in the "civic" and in the rural unions of Ireland shows an increase as compared with 1912.

I have constructed a Map, facing this page, depicting this information for each county of Ireland as derived from the following table which gives the facts arranged in order from the county having the lowest rate to that which has the highest.

Table showing, by counties, the number of deaths of Infants under one year of age per 1,000 Births registered during the year 1913.

County.	Infant mortality per 1,000 Births	County.	Infant mortality per 1,000 Births
Leitrim,	51.3	Queen's,	87.1
Roscommon,	52.9	Armagh,	87.5
Fermanagh,	59.5	Westford,	87.4
Mayo,	59.9	Carlow,	88.5
Donegal,	64.0	Louth,	90.1
Galway,	65.9	Kildare,	91.4
Cavan,	67.4	Limerick Co. and Co. Borough,	91.3
Sligo,	67.7	Cork Co. and Co. Borough,	92.0
Westmeath,	68.8	Londonderry Co. and Co. Borough	96.8
Kerry,	70.1	Down Co. and part of Belfast Co.	99.5
Longford,	71.9	Borough,	
Clare,	78.7	Tipperary, S.R.	108.6
Wicklow,	79.5	Kilkenny,	109.7
Tyness,	80.3	Waterford Co. and Co. Borough,	124.5
Tipperary, N.R.	81.8	Antrim Co. and Belfast Co.	128.4
King's,	82.2	Borough, part of	
Monaghan,	82.5	Dublin Co. and Co. Borough, ..	131.2

The five counties having the lowest rates of infant mortality are Leitrim (51.3), Roscommon (52.9), Fermanagh (59.5), Mayo (59.9), and Donegal (64.0); the highest five county areas being Dublin County and county borough (131.2); Antrim county and Belfast county borough, part of (128.4); Waterford county and county borough (124.5); Kilkenny county (109.7), and Tipperary, S.R. (108.6).

The subjoined table gives the infant mortality in the Dublin Registration Area and Belfast in comparison with that of London, Liverpool, Edinburgh and Glasgow for a period of 10 years.

Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county borough of Belfast, and in London, Liverpool, Edinburgh and Glasgow, during the years 1904-1913.

Areas.	Deaths of Infants under one Year of Age to every 1,000 Births.									
	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.	1912.	1913.
Dublin Registration Area,	169	143	146	158	166	141	142	156	160	153
Belfast County Borough,	154	134	144	135	147	135	143	138	129	144
London,	145	130	131	116	113	108	105	108	99	100
Liverpool,	195	155	172	144	141	144	140	134	125	131
Edinburgh,	130	135	118	127	123	119	111	118	113	108
Glasgow,	146	131	131	139	137	133	121	138	124	129

From the above, it will be observed that, with the exception of Edinburgh, the infant mortality rate for which is lower for 1913 than for 1912, all the other areas show an increase, the rate for Dublin Registration Area rising from 140 per 1,000 births in 1912 to 153 in 1913, that for Belfast from 129 to 144; London from 99 to 105; Liverpool from 125 to 131; and Glasgow from 124 to 129.

The causes of the deaths of infants are given in detail in the abstracts commencing on page 120. These causes are summarised in the table which follows, in which deaths from certain causes are grouped together. The deaths are given in three groups of age-periods, namely, under 3 months, from 3 months to 6 months, and from 6 months to 12 months.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the Year 1913, distinguishing between those under 3 months old, 3 months and under 6 and 6 months and under 12.

	Other Causes,	3.40	0.82	1.85	6.07

From the foregoing table it would appear that the mortality rate of infants under 3 months old was 57.37 per 1,000 births registered; at 3 months of age and under 6 months it was 17.45 per 1,000; and between the ages of 6 months and one year it was 22.30 per 1,000 of all births registered.

Of the principal causes of infant mortality more than one-third is attributed to a group—wasting diseases—which includes deaths from prematurity, congenital malformations, wast of breast milk, and atrophy, debility, and marasmus. Diarrhoeal diseases and gastritis caused an infant mortality rate of 18.21 per 1,000 births registered as compared with 8.95 in the preceding year; convulsions accounts for 9.49 deaths, bronchitis for 9.44, and pneumonia for 7.03 per 1,000 births registered. Among the common infective diseases whooping-cough showed the highest death-rate, causing 2.98 deaths, measles coming next, with a rate of 1.86 deaths per 1,000 births registered. The infant mortality attributable to all forms of tuberculous diseases is 2.65 per 1,000 of all births registered in Ireland during the year 1913 as compared with 2.47 in the year 1912.

A table on page xli. gives statistics for 27 towns districts of Ireland and is derived from the Yearly Summaries of the Registrars' Returns for the years 1909 to 1913, inclusive. It will be seen that the infant mortality rate for the year 1913 for these districts in the aggregate was 141 per 1,000 births registered as against 125 in 1912.

The highest rate was in Newry, namely, 193; in Queenstown, it was 175; in Waterford, 167; in Tralee, 156; in Dublin Registration Area, 153; and in Dundalk, 151. In the following towns the lowest infant mortality rates were recorded:—Drogheda, 64; Athlone, 70; Lurgan, 76; Bangor, 77; Limerick, 82; and Armagh, 87.

EMIGRATION.

According to the returns collected and forwarded to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1913 was 30,967, of whom 16,452 were males and 14,515 females. Of the total emigrants, 3,394 were natives of the province of Leinster, 7,807 of Munster, 12,392 of Ulster, and 6,774 of Connaught.

Of the 30,967 emigrants, 8.0 per cent. were under 15 years of age, 85.4 per cent. were between 15 and 35 years old, and 6.6 per cent. were 35 years or upwards.

*Prices derived from returns received from Messrs. Roberts, Limited, and Messrs. Johnston, Mooney and O'Brien, Limited.

†Average prices of beef for three quarters. The markets were closed during the greater part of the quarter ended 29th September.

‡Computed from Returns furnished by the Local Government Board.

[See, including those relieved by means of works devised for the relief of distress, viz.:—an average of 2,199 in First Quarter, 2,658 in Second Quarter and 2,648 in Third Quarter of 1905, and an average of 1,602 in First Quarter, 1,120 in Second Quarter, and 2,645 in Third Quarter of 1906.]

From the foregoing table it would appear that in the year 1905 the prices of beef were lowest, when the average ranged from 48s. 6d. to 54s. 6d. per cwt.; in the years 1903 and 1906 bread was cheapest, when the average price (1st quality delivered) was 5½d. per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1911, in which year the average price was 13s. 8d. per cwt.; and potatoes in 1905, when the average range of prices was from 2s. 7d. to 3s. 2d. per cwt. The highest price of bread was in the year 1912, when the 4 lb. loaf averaged 6½d., and in the year 1913 the price of oatmeal was highest, viz., 16s. per cwt. The highest rates for potatoes were from 4s. 1d. to 4s. 6d. per cwt. in 1913, and 4s. to 4s. 6d. in 1907, and for beef from 57s. 6d. to 64s. 6d. per cwt. in 1912. [See note (†) above.]

I desire to express my thanks to the Commissioners of the Local Government Board for Ireland for having kindly furnished me with the returns contained in this Report relating to Pauperism in Ireland. It would appear from these returns (see Table XVII.) that the average number of workhouse inmates in Ireland on Saturdays during the year 1913 was 36,582, being 1,069 below the average for the preceding year; and that the average number of persons receiving out-door relief was 38,438, or, 1,780 below the corresponding number for 1912.

THE WEATHER.

The information which follows and also that given on pages 151-162 is presented, as heretofore, through the kind permission of the Editors of the "Dublin Journal of Medical Science," having been extracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., F.R.C., F.R.C.P.I., F.R.M.E. Soc., D.L., Hon. Physician in Ordinary to His Majesty the King in Ireland: and published in the Journal during the years 1913-1914. The tables on page 162-163 have also been compiled from Sir John Moore's observations.

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least .01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1913 was 29.914 inches. The highest observed reading was 30.126 inches at 9 A.M. on December 21st. The lowest observed reading was 28.700 inches at 4 A.M. on March 19th. The extreme range of atmospheric pressure was 2.024 inches, as compared with 1.922 inches in 1912.

The Mean Temperature of the air for the year was 50.2°. The highest reading was 78.8° on August 14th, and the lowest reading was 25.6° on December 31st. The average mean temperature for the years 1893-1912, was 50.2°.

Rain fell on 190 days, including snow or sleet on 12 days and hail on 20 days. The average annual number of rainy days in the years 1893-1912, was 189.9. The total rainfall measured 28.412 inches, compared with an average of 27.636 inches in the twenty years, 1893-1912. During the first half of 1913 (January to June, inclusive) the rainfall was 16.067 inches on 104 days; during the second half (July to December, inclusive) 12.745 inches fell on 85 days.

My thanks are due to Dr. Ninian M. Falkiner, Superintendent of the Statistics Branch of this Department, for the valuable assistance rendered by him in the preparation of this Report to which he has devoted his customary care and attention.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,

Registrar-General.

MARRIAGES, BIRTHS and DEATHS registered in the Year 1913.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1913.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

* LISTED in the margin (—) is prefixed to the numbers given in the column headed "Deaths of Still-born Infants," to denote that the births, instead of exceeding the deaths, were, in fact, less than the deaths in the district stated.

			TOTAL.			BIRTHS.				DEATHS.		Excess of Births over Deaths.	
SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Popu- lation 1911.	MARRIAGES.	MIDWIVES.	RELIGIOUS.	Including Still-born Births.		Excluding Still-born Births.		Males.	Females.

8	Tallaght,	11,468	2,524	55	46	29	26	1	-	23	15	18

* New districts constituted, as from 1st April, from the former district of Rathcoole.

Note.—The Registrars' Districts are subdivisions of the Union or Superintendent Registrar's Districts, and are identical with the Dispensary Districts of the same name, except in a few instances. See note ("A," page 2.

The letter W denotes that the Registrar's District contains within its limits the Workhouses belonging to the Union or Superintendent Registrar's District.

Whenever the minus sign (-) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1913.—RAGNETT'S DISTRICTS arranged by COUNTIES

NOTE.—This Table has been constructed for the years 1829 to 1913—by adopting the rate of increase between the population of 1811 and 1841, according to the Census Report of 1841.

1841 to 1849—by taking the English Average Mortality of 1 in 25, and deducting 1 in 40, and deducing the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1849 to 1851.—The English Mortality, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Census Reports of 1851; or, otherwise, proportioned to the number at previous deaths and the number of emigrants from 1849 to 1851.—The English Mortality and the rate of emigration, as above, were used, deducting the number of emigrants, according to the returns from 1851 to 1854.—The English Mortality and the rate of emigration, as above, were used, deducting the number of emigrants, according to the returns from 1854 to 1857.—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1857 to 1861, 1861 to 1865, and 1865 to 1869, by adding for the discrepancy between the number then arrived at for 1861, 1865, 1869, and 1873, respectively, of the population as shown by the Census in each of these years.

AGES OF THE POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and 1911.

Periods.	Sexes.	AGES—Years.												Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 30.	30 and under 35.	35 and under 40.	40 and under 45.	45 and under 50.	50 and under 55.	
1861.	Males.	18,000	282,110	246,712	197,074	222,264	221,720	208,792	171,571	121,320	224,481	97,228	56,416	790
	Females.	17,000	274,102	241,702	191,097	217,018	211,150	199,727	166,555	118,510	218,510	95,000	55,000	790
1871.	Males.	87,878	294,885	251,554	202,565	226,627	216,281	202,581	180,451	124,552	204,718	113,808	58,000	810
	Females.	87,878	294,885	251,554	202,565	226,627	216,281	202,581	180,451	124,552	204,718	113,808	58,000	810
1881.	Males.	154,558	508,322	414,881	316,004	374,022	351,554	326,258	280,451	190,451	270,451	150,451	60,451	810
	Females.	154,558	508,322	414,881	316,004	374,022	351,554	326,258	280,451	190,451	270,451	150,451	60,451	810
1891.	Males.	214,558	694,322	564,881	436,004	514,022	481,554	446,258	380,451	250,451	370,451	220,451	80,451	810
	Females.	214,558	694,322	564,881	436,004	514,022	481,554	446,258	380,451	250,451	370,451	220,451	80,451	810
1901.	Males.	274,558	894,322	724,881	556,004	654,022	611,554	566,258	480,451	310,451	470,451	280,451	100,451	810
	Females.	274,558	894,322	724,881	556,004	654,022	611,554	566,258	480,451	310,451	470,451	280,451	100,451	810
1911.	Males.	334,558	1,094,322	884,881	676,004	794,022	741,554	686,258	580,451	370,451	570,451	340,451	120,451	810
	Females.	334,558	1,094,322	884,881	676,004	794,022	741,554	686,258	580,451	370,451	570,451	340,451	120,451	810

* In 1861 females in 1861—2,885 males, and 1,080 females, or 2,795 females in 1871, viz., 1,710 males, and 1,085 females, in 1881, viz., 1,740 males, and 1,085 females, in 1891, viz., 1,740 males, and 1,085 females, in 1901, viz., 1,740 males, and 1,085 females, in 1911, viz., 1,740 males, and 1,085 females, the age was not stated in the Census.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1913.

By SIR JOHN W. MOORE, Honorary Physician in Ordinary to His Majesty the King in Ireland, B.A., M.D., DUBL.; D.S.C., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*).

JANUARY.—An open, stormy, very wet month. The rainfall (5.576 inches) was only once exceeded in January—namely, in 1895, when 5.711 inches were recorded on 24 days. But the mean temperature of January, 1895, was 35.6°, compared with 43.4° in January, 1913. The wind was S.E., S., or S.W., on 44 out of 63 occasions when the direction was taken at 9 a.m. and 9 p.m. Gales (force 8) occurred on 5 days, fogs on 2 days; snow or sleet fell on 4 days, hail on 3 days. Lightning was seen on the 20th. During the first 12 days the barometer was almost constantly at or below 29 inches in Ireland and gradients for S.W. winds were very steep over the Atlantic. Later in the month atmospheric depressions passed near or directly over the British Islands. But in the deepest depression of the month the low reading of 28.22 inches was reported from Seydisfjord, on the east coast of Iceland, at 7 a.m. of the 31st. The last 12 days of the month were very cold in Sweden, the thermometer falling to -4° at Stockholm on the 28th and to -20° at Haparanda on the 29th. In Spitzbergen at 7 a.m. on the 23rd the thermometer stood at -29°, or 61° below the freezing point. In the same island on the morning of the 13th, temperature was 33° Fahr., or 3° above freezing-point.

Mr. Richard M. Barrington reports that the rainfall at Passmore, Bray, Co. Wicklow, amounted to 16.42 inches, establishing a record precipitation for January. There had been no such rainfall in January at Passmore since the year 1863, when 10.27 inches were measured.

In Dublin the arithmetical mean temperature (43.4°) was above the average (41.7°) by 1.7° the mean dry-bulb readings at 9 a.m. and 9 p.m., were 43.6°. In the forty-eight years ending with 1913, January was coldest in 1881 (M. T. = 33.2°), and warmest in 1898 (M. T. = 47.8°). In 1912 the M. T. was 42.1°.

The mean height of the barometer was 29.608 inches, or 0.266 inch below the corrected average value for January—namely, 29.874 inches. The mercury rose to 30.287 inches at 9 a.m. of the 26th, and fell to 28.875 inches at 9 a.m. of the 20th. The observed range of atmospheric pressure was, therefore, 1.412 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42.8°, or 0.7° above the value for January, 1912. Using the formula, $\text{Mean Temp.} = \frac{\text{Max.} + (\text{Min.} - \text{Max.}) \times .02}{.02}$, the M. T. becomes 43.5°, compared with a thirty-five years' (1871-1905) average of 41.9°. The arithmetical mean of the maximal and minimal readings was 43.4°, compared with a thirty-five years' average of 41.7°. On the 7th the thermometer in the screen rose to 55.4°—wind, S.W.; on the 13th the temperature fell to 28.1°—wind calm. The minimum on the grass was 24.7° on the 14th.

The rainfall was 5.576 inches, distributed over 21 days. Of this amount 1.522 inches fell on the 16th. The average rainfall for January in the thirty-five years, 1871-1905, inclusive, was 2.219 inches, and the average number of rain-days was 18. The rainfall, therefore, and the rain-days were above the average—the rainfall to the extent of 152 per cent. The record rainfall for January was in 1895—namely, 5.711 inches on 24 days. In 1876, only .496 inch was measured on but 9 days. In 1907, only .428 inch fell on but 9 days. In 1911, only .638 inch fell on 10 days, but in 1912, 3.530 inches fell on 19 days.

The atmosphere was foggy on the 13th and 14th. High winds were noted on 12 days, and reached the force of a gale on the 3rd, 9th, 10th, 11th, and 14th. Snow and hail fell on the 13th and 31st.—hail alone on the 19th, and sleet on the 14th and 30th. A lunar halo was seen on the 18th, 18th, 21st, and 30th; solar halos appeared on the 4th and 29th; a lunar corona on the 15th, 19th, and 21st. Temperature reached or exceeded 59° in the screen on 11 days; while it fell to 33° in the screen on 2 nights. The grass minimum was 32° or less on 13 nights. On the 13th the maximal temperature in the screen was 41.4°. Lightning was seen on the evening of the 20th.

At the Normal Climatological station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 29.622 inches, the range of atmospheric pressure being from 30.30 inches at 9 a.m. of the 26th to 28.91 inches at 9 a.m. of the 20th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43.3°. The arithmetical mean of the daily maximal and minimal temperatures was 43.4°. The screened thermometers rose to 57° on the 7th, and fell to 25° on the 13th. On the 6th and 13th the grass minimum was 21°. Rain fell on 20 days to the amount of 5.36 inches, the greatest fall in 24 hours being 1.44 inches on the 16th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 33.3 hours, of which 3.8 hours occurred on the 14th. The mean daily sunshine was 1.1 hour. The mean temperature of the soil at 9 a.m. was 41.4° at a depth of 1 foot; at a depth of 4 feet it was 44.7°.

FEBRUARY.—Although rain fell daily on the first nine days of the month, February proved fine, dry, and on the whole mild. In the third week, however, easterly winds prevailed, blowing strongly and with bitter coldness. The month had opened with low pressures in the vicinity of Iceland, steep gradients for S.W. winds on the Atlantic between that island and the British Isles, and mild, showery, blustering weather. On the mornings of the 3rd and 7th the barometer was below 28·4 inches off the south coast of Ireland. In the course of the latter day a very energetic secondary depression passed rapidly north-eastward along the western shores of Ireland and Scotland. It caused violent S.W. gales in nearly all parts of Great Britain and Ireland, and at 5 a.m. of the 8th, a squall of hurricane force passed over Aberdeen, the wind blowing at the rate of 76 miles per hour. A change began on Sunday, the 9th, when an anticyclone began to spread westward from Central Europe. By the morning of the 11th, the British Isles had come within the borders of this system, and its calms and resulting chill covered the country with dense fogs. The meteorological feature of the morning of the 13th was the vast extent of fog area which covered the east of Ireland, nearly the whole of England and Wales, and the Continent as far as Bavaria and the North of Denmark. Next morning fog was again very prevalent between the S.W. of Spain and the south of Norway—in places it was dense and wet, yielding appreciable measurements in the rain-gauges. It was not until the morning of the 16th that the fog dispersed as an easterly to north-easterly wind spring up, bringing very cold dry weather to all parts. On the Continent there was a severe and steady frost at that time. The last change began in the west of Ireland on Sunday, the 23rd, when a large depression spread in from the Atlantic, bringing in its train clouds, milder southerly winds, and rain, which was heavy in Munster and Connaught.

In Dublin the mean temperature (43·4°) was 1·0 above the average (42·4°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·7. In the forty-nine years ending with 1913, February was coldest in 1865 (M. T. = 34·2°), and warmest in 1903 (M. T. = 47·5°). In 1912 the mean temperature was 45·7°.

The mean height of the barometer was 30·688 inches, or 0·233 inch above the average value for February—namely, 30·455 inches. The mercury rose to 30·624 inches at 9 a.m. of the 12th, and fell to 29·123 inches at 6·30 p.m. of the 7th. The observed range of atmospheric pressure was, therefore, 1·462 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·7°, or 0·1° above the value for January, 1913. Using the formula, *Mean Temp.* = *Min.* + (*Max.* - *Min.*) × .50, the M. T. is 43·4°, compared with a thirty-five years' (1871-1905) average of 42·4°. On the 7th the thermometer in the screen rose to 36·1°—wind, S.W., blowing a violent gale; on the 14th it fell to 32·3°—wind, W. The minimum on the grass was 29·7° on the 14th.

The rainfall was ·602 inch, distributed over 12 days. The average rainfall for February in the thirty-five years, 1871-1905, inclusive, was 3·010 inches, and the average number of rain-days was 15. The rainfall therefore, and also the rain-days were much below the average. In 1883 the rainfall in February was large—3·762 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1912, 3·532 inches fell on 18 days.

Fog occurred on the 11th and four following days, and also on the 28th. The amount of cloud—61·3 per cent.—was under the average—65 per cent. High winds were noted on 7 days, and reached the force of a violent gale on the 7th. Hail fell on the 20th.

The temperature reached or exceeded 50° in the screen on 12 days, and fell to 32° on only 1 night. The minima on the grass were 32° or less on only 2 nights, compared with every night in 1865. The thermometer failed to rise to 40° in the screen in the daytime on the 1st. The highest minimum was 46·9° on the 3rd.

In Dublin the rainfall up to February 28th amounted to 6·178 inches on 33 days, compared with a thirty-five years' (1871-1905) average of 4·220 inches on 33 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 30·110 inches. The range of atmospheric pressure was between 29·48 inch at 9 p.m. of the 11th and 30·47 inches at 9 p.m. of the 7th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·3°. The arithmetical mean of the daily maximal and minimal temperatures was 43·3°. The screened thermometers rose to 57° on the 7th, and fell to 31° on the 14th. On the 17th the grass minimum was 33°. Rain fell on 10 days to the amount of ·52 inch, the greatest fall in 24 hours being ·13 inch on the 24th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 38·0 hours, of which 5·1 hours occurred on the 10th. The mean daily duration of bright sunshine was 1·4 hours. The mean earth temperatures were—at 1 ft., 42·0°; at 4 ft., 44·3°.

MARCH.—March, 1913, may best be described as an unsettled windy month, of medium temperature, frequent although not heavy rains, and preponderating westerly and south-westerly winds. The precipitation, which was in excess of the average, consisted of hail and sleet or snow on several of the twenty-two "rain-days." There were fresh gales on the 5th and 10th. Sheet lightning was seen on the nights of the 15th and 20th. The sky was often remarkably free from cloud—the estimated percentage of cloud was 51·4 at 9 a.m., and on 37·7 at 9 p.m.—the mean being 44·7.

The general distribution of atmospheric pressure did not differ much from that of the earlier months of the year. But at times the Atlantic depressions travelled in a more easterly direction than previously, and also passed nearer the British Islands. The most serious depression of the month was that of the 4th and 5th. Its centre crossed Ireland from W.S.W. to E.N.E. At 7 a.m. of the 4th, the barometer read 27·84 inches at Reykjavik, and 27·87 inches at Vestmanna; at 6 p.m. Seydisfjord reported 27·79 inches—at a time, as it observed, when pressure was as high as 30·50 inches in the Azores, and 30·40 inches over Central France and Spain. On the 19th also the barometer fell to 28·36 inches at Carlsbay, Born Island, off the west coast of Scotland, in a depression which caused violent gales over the British Isles, and afterwards in Denmark also.

In Dublin the arithmetical mean temperature (43.8°) was 0.1° above the average (43.7°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 43.0° . In the forty-nine years ending with 1913, March was coldest in 1887 and 1883 (M.T. = 39.0°), and warmest in 1903 (M.T. = 48.1°). In 1912 the M.T. was 46.3° .

The mean height of the barometer was 29.729 inches, or 0.181 inch below the corrected average value for March—namely, 29.916 inches. The mercury rose to 30.468 inches at 9 p.m. of the 8th and fell to 29.700 inches at 4 a.m. of the 19th. The observed range of atmospheric pressure was, therefore, 1.768 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43.0° . Using the formula, *Mean Temp.* = $\text{Min.} + (\text{Max.} - \text{Min.}) \times .485$, the M.T. becomes 43.4° . The arithmetical mean of the maximal and minimal readings was 43.8° , compared with a thirty-five years' (1871-1905) average of 43.7° . The mean maximum was 49.8° , the mean minimum, 38.0° . On the 4th the thermometer in the screen rose to 57.1° —wind, S.W.; on the 18th it fell to 28.1° —wind, calm. The minimum on the grass was 24.3° , also on the 18th.

The rainfall was 2.155 inches, distributed over 23 days. The average rainfall for March in the thirty-five years, 1871-1905, inclusive, was 1.919 inches, and the average number of rain-days was 17. The rainfall therefore, and also the rain-days were above the average. In 1867 the rainfall in March was very large—4.972 inches on 23 days. On the other hand, the smallest March rainfall was .288 inch on 8 days in 1893. In 1912 the rainfall was 2.727 inches on 24 days.

High winds were noted on 14 days, but reached the force of a fresh gale only on the 5th and 19th. A solar halo appeared on the 13th, 18th and 29th. There was a lunar ocean on the night of the 18th. Hail fell on the 1th, 14th, 19th, 20th, 21st, and 23rd; sleet or snow on the 7th, 15th, 16th and 17th. The lowest daily maximum temperature was 42.5° on the 18th. The highest daily maximum was 44.6° on the 1st.

The rainfall in Dublin during the three months ending March 31st, amounted to 8.833 inches on 55 days compared with 3.292 inches on 44 days in 1911, 8.799 inches on 61 days in 1912, and a thirty-five years' (1871-1905 inclusive) average of 6.136 inches on 50.6 days.

At the Normal Climatological Station in Trinity College, Dublin, the Observer, Mr. C. D. Clark, reports that the mean temperature was 43.6° , the mean dry-bulb reading at 9 a.m. and 9 p.m. being 43.8° . The screened thermometers rose to 58° on the 4th, and fell to 36° on the 18th. The grass minimum was 16° on the 18th. The mean daily maximum was 50.2° , and the mean daily minimum, 38.5° . Rain fell on 30 days to the amount of 2.14 inches, .29 inch being measured on the 2nd. There were 133.7 hours of bright sunshine, of which 8.7 hours occurred on the 30th. The mean temperature of the soil at 9 a.m. at a depth of one foot was 43.2° ; at a depth of 4 feet it was 44.5° .

ARAB.—A greatly favourable month—without extremes of temperature. The first 10 days were dry except for copious showers on the 2nd (~ 1.21 inch), and during this period S.E. to N.E. and N. winds prevailed. The diurnal range of temperature in this fine spell was large—on the 8th the thermometer rose from 40.2° to 58.1° . On the 10th a broken period set in, lasting to the 20th. Rain fell daily to a large or smaller amount, and prevalent S.W. or W. winds blew freshly at times. The 21st and two following days were very fine and dry, but the weather again became unsettled on the 24th and so continued to the close. Quite suddenly on the afternoon of the 25th snow and sleet took the place of rain, and next morning the Dublin and Wicklow mountains were deeply covered with snow. On Tuesday, the 29th, a rain-storm occurred in Ireland, and a severe thunderstorm raged in the southern and south-eastern parts of England, where the day had been warm— 69° in the screen being reached at Camden Square, London, N.W. On that same day the thermometer rose in the shade to 77° at Frankfurt, 79° in Brussels, 80° in Paris, and 82° in Berlin. At Spitzbergen the temperature ranged on the 29th from -8° to $+12^{\circ}$. As regards atmospheric pressure, the barometer fell to 28.54 inches at Malin Head on the evening of the 30th. At that station it had been as high as 30.45 inches on the morning of the 4th, when an anticyclone in the north determined a cold N.E. wind in the British Isles.

In Dublin the arithmetical mean temperature (47.6°) was just equal to the average (47.6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 46.5° . In the forty-nine years ending with 1913, April was coldest in 1879 (the cold year) (M.T. = 44.5°), and warmest in 1895 (M.T. = 51.4°). In 1912 the M.T. was 49.5° .

The mean height of the barometer was 29.802 inches, or 0.048 inch below the average value for April—namely 29.850 inches. The mercury rose to 30.358 inches at 9 a.m. of the 4th, and fell to 29.800 inches at 4 p.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1.558 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46.5° , or 3.5° above the value for March, 1913. Using the formula, *Mean Temp.* = $\text{Min.} + (\text{Max.} - \text{Min.}) \times .476$, the value is 47.3° , or exactly equal to the average mean temperature for April, calculated in the same way, in the thirty-five years, 1871-1905, (47.3°). The arithmetical mean of the maximal and minimal readings was 47.6° , compared with a thirty-five years' (1871-1905) average of 47.6° . On the 30th the thermometer in the screen rose to 58.2° —wind S.S.W.; on the 26th the temperature fell to 35.7° —wind S.S.E. The minimum on the grass was 32.9° on the 20th. The mean maximal temperature was 55.4° , the mean minimum, 41.7° .

The rainfall was 2.764 inches, distributed over 19 days. The average rainfall for April in the thirty-five years, 1871-1905, was 1.940 inches, and the average number of rain-days was 16. The rainfall, therefore, and also the rain-days were considerably above the average. In 1877 the rainfall in April was very large—4.707 inches on 21 days. On the other hand, in 1873, only .498 inch was measured on 8 days. In 1912, 1.320 inches fell on only 7 days.

High winds were noted on 10 days, but reached the force of a gale only on the 25th. Hail fell on the 1st, 16th, 17th, 19th and 27th; sleet and snow on the 25th. The temperature never rose above 60° in the screen. It failed to reach 60° on the 12th. It never fell to 32° in the screen, or below 32° on the grass. The mean lowest temperature on the grass was 38·4°, compared with 39·7° in 1912, 40·2° in 1911, 36·9° in 1910, 39·0° in 1909, 35·4° in 1908, 36·7° in 1907, 35·6° in 1906, 37·3° in 1905, 39·1° in 1904, 37·6° in 1903, 38·8° in 1902, 37·3° in 1901, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 11·097 inches on 74 days compared with only 4·790 inches on 59 days in 1911, 10·119 inches on 88 days in 1912, an average of 8·335 inches on 89 days in the first decade of the twentieth century, and a thirty-five years' (1871-1905) average of 8·070 inches on 66 days.

At the Normal Climatological station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 29·829 inches, the range of atmospheric pressure being from 30·35 inches at 9 a.m. of the 4th, to 29·08 inches at 9 p.m. of the 28th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m., was 47·1°. The arithmetical mean of the daily maximal and minimal temperature was 46·7°. The screened thermometers rose to 60° on 30th, and fell to 32° on the 12th. On the 7th the grass minimum was 35°. Rain fell on 17 days to the amount of 3·67 inches, the greatest fall in 24 hours being ·82 inch on the 29th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 124·0 hours, of which 10·5 hours occurred on the 15th. The mean daily duration of sunshine was 4·2 hours. The mean temperature of the soil at 9 a.m. was 47·2° at a depth of 1 foot; at a depth of 4 feet it was 44·6°.

MAY.—The early part of May was unsettled, cold and rainy or showery. In the week ended Saturday, the 10th, the sky was much clouded, rain fell frequently, thunder and had showers being reported from time to time in many districts. On the 11th the thermometer ran up to 63·1° in Dublin, but the next day was dreary and wet, with easterly winds and the thermometer ranging only from 48·2° to 51·3°. After this the weather improved, remaining chiefly fine until the 21st, on which day hail fell heavily in Dublin, and thunder and lightning occurred in several places. On the 24th a spell of hot weather set in over the south of Ireland, and even in Dublin the thermometer rose to 67·2° in the screen—the highest reading for the month. At Greenwich the thermometer rose in the shade to 75° on the day named, 78° being reached at Camden Square, London, N.W. The readings at these stations during the following days were unusually high for May—namely, Greenwich—81°, 84°, 86°, 81°, 81°, 80°; Camden Square—82°, 84°, 84°, 83°, 83°, 80°. On Saturday, the 31st, a brisk dip in temperature was observed in the London area, for the maximum was only 63° at Greenwich, and 68° at Camden Square. Dublin almost escaped the electrical disturbances of the month, but in the south of England there were severe storms on the 27th, and in the course of the night of the 29th.

In Dublin the arithmetical mean temperature (52·3°) was 0·1° above the average (52·2°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 51·5°. In the forty-eight years ending with 1913, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 58·7°). In 1911 the M. T. was 55·3°, and in 1912, 53·5°.

The mean height of the barometer was 29·850 inches, or 0·130 inch below the corrected average value for May—namely, 29·980 inches. The mercury rose to 30·332 inches at 9 p.m. of the 14th, and fell to 29·043 inches at 1 p.m. of the 8th. The observed range of atmospheric pressure was, therefore, 1·289 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 51·5°, or 5·0° above the value for April, 1913—46·5°. Using the formula *Mean Temp. = (Max. + (Max. - Min.) × .47)*, the value is 52·0°, or 0·2° above the average mean temperature for May, calculated in the same way, in the thirty-five years, 1871-1905, inclusive, (51·8°). The arithmetical mean of the maximal and minimal readings was 52·3°, compared with a thirty-five years' average of 52·2°. On the 24th the thermometer in the screen rose to 67·2°—wind, W.; on the 4th the temperature fell to 38·2°—wind, N.N.W. The same reading was recorded on the 7th, wind, S.S.E. The minimum on the grass was 34·9° on the 7th.

The rainfall amounted to 2·892 inches, distributed over 17 days. The average rainfall for May in the thirty-five years, 1871-1905, inclusive, was 1·970 inches, and the average number of rain-days was 15. The rainfall therefore was considerably above the average, while the rain-days were 2 in excess. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1911, 1·236 inches fell on 10 days; in 1912, 1·042 inches on 19 days.

A lunar corona appeared on the 11th. High winds were noted on 6 days, including a gale on the 30th. Hail fell on the 21st. Thunder was heard on the 1st.

The mean minimal temperature on the grass was 43·4°, compared with 44·5° in 1912; 46·2° in 1911; 42·0° in 1910; 41·9° in 1909; 45·2° in 1908; 41·6° in 1907; 41·9° in 1906; 42·5° in 1905; 42·6° in 1904; 44·3° in 1903; 40·3° in 1902, 41·7° in 1901, and 37·6° in 1894. The maximum fell short of 50° on the 6th (46·3°). The absolute maximum was 67·2° on the 24th.

The rainfall in Dublin during the five months ended May 31st amounted to 13·899 inches on 91 days, compared with 11·161 inches on 87 days in 1912, 5·986 inches on 69 days in 1911, 12·421 inches on 92 days in 1910, 10·098 inches on 75 days in 1909, 10·078 inches on 90 days in 1908, 9·499 inches on 81 days in 1907, 11·592 inches on 97 days in 1906, 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 105 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 5·971 inches on 70 days in 1898, and a thirty-five years' average of 10·040 inches on 81 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, returns the arithmetical mean temperature as 54.8° the mean dry-bulb reading at 9 a.m. and 9 p.m. being 53.1° . Rain fell on 13 days to the amount of 2.71 inches, .49 inch being measured on the 5th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 150.2, giving a daily average of 5.1 hours. The corresponding figures for May, 1904, were 152.5 hours and 6.2 hours; for 1905, 213.7 hours and 7.0 hours; for 1906 132.5 hours and 4.3 hours; for 1907, 113.0 hours and 5.6 hours; for 1908 193.9 hours and 6.3 hours; for 1909 251.5 hours and 7.5 hours; for 1910, 115.5 hours and 5.7 hours; for 1911, 214.0 hours and 6.9 hours, and for 1912, 187.8 hours and 5.1 hours respectively. The mean earth-temperature at 9 a.m. was 52.3° at a depth of one foot below the surface, 49.1° at 4 feet. The corresponding values for 1912 were 54.5° and 51.7° ; for 1911, 54.6° and 51.0° ; for 1910, 54.7° and 49.3° , and for 1908, 53.3° and 50.0° . The lowest temperature on the grass (thermometrical radiation) was 29.0° on the 7th. The highest temperature in the shade was 68° on the 24th; the lowest was 36.0° on the 7th.

JUNE.—A generally favourable month—the first half distinctly cool and changeable, with brisk S.W., and afterwards N.W. winds, and frequent though not heavy rainfalls. On the 9th the wind rose to the force of a fresh gale from S.W. and W.S.W. Anticyclonic conditions prevailed from the 12th to the 16th inclusive, and the weather was fine, dry, and warm. On the 11th the thermometer rose in the shade to 75.1° in Dublin, 82° at St. James's Park, London, 80° at Camden Square, London, and 87° at the Royal Observatory, Greenwich. Two days later the maximum in Dublin was 61.7° . Local showers occurred in this city on the 23rd and 29th, thunder, lightning, and hail accompanying one such shower on the afternoon of the 23rd. The closing days of the month were beautifully fine, warm, and bright, with light breezes at first from N.W., afterwards from N.E. During this spell of high summer the barometer stood high and was steady.

In Dublin the arithmetical mean temperature (51.1°) was below the average (51.9°) by 0.8° ; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 56.6° . In the forty-nine years ending with 1913, June was coldest in 1909 (M. T. = 54.8°), 1907 (M. T. = 55.4°), 1882 (M. T. = 55.8°), and 1879 ("the cold year") (M. T. = 55.9°). It was warmest in 1881 (M. T. = 62.3°), 1896 (M. T. = 61.4°), and 1899 (M. T. = 61.3°). June, 1909 established a record for coldness. In 1913 the M. T. was 51.1° .

The mean height of the barometer was 30.049 inches, or 0.132 inch above the corrected average value for June—namely, 29.917 inches. The mercury rose to 30.461 inches at 9 p.m. of the 28th, and fell to 29.061 inches at 4 p.m. of the 8th. The observed range of atmospheric pressure was, therefore, .400 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56.4° , or 5.1° above the corresponding M. T. for May, 1913. Using the formula, $\text{Mean Temp.} = \frac{\text{Min.} + (\text{Max.} - \text{Min.}) \times .466}{2}$, the value was 56.4° , or 0.8 below the average mean temperature for June, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (57.4°). The arithmetical mean of the maximal and minimal readings was 57.1° , compared with a thirty-five years' average of 57.9° . On the 15th the thermometer in the screen rose to 75.1° —wind, N.E.: on the 12th the temperature fell to 43.4° —wind, N.N.W. The minimum on the grass was 41.1° , also on the 12th.

The rainfall amounted to 1.198 inches on 13 days. The average rainfall for June in the thirty-five years, 1871–1905, inclusive, was 1.990 inches, and the average number of rain-days was 15. The rainfall, therefore, and the rain-days were below the average. In 1875 the rainfall in June was very large—5.008 inches on 19 days: in 1879 also, 4.046 inches fell on 24 days. On the other hand, in 1883, only .100 inch was measured on 6 days. In 1887 the rainfall was only .252 inch, distributed over 5 days. June, 1910, established an undisputed record for excessive rainfall in Dublin—the measurement being 6.211 inches on 19 days. In 1913, 2.405 inches fell on 23 days.

High winds were noted on 7 days, reaching gale-force (8) on the 8th.

The rainfall in Dublin during the six months ending June 30th, amounted to 15.097 inches on 104 days, compared with 15.154 inches on 110 days in 1912, 7.129 inches on 80 days in 1911, 18.632 inches on 111 days in 1910, 12.061 inches on 84 days in 1909, 11.729 inches on 107 days in 1908, 12.336 inches on 108 days in 1907, 12.641 inches on 109 days in 1906, only 6.741 inches on 65 days in 1883, and a thirty-five years' average of 13.090 inches on 86 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the arithmetical mean temperature was 56.5° , the mean dry-bulb reading at 9 a.m. and 9 p.m. being 61.2° . The thermometer rose to 76° in the shade on the 17th, and fell to 42° on the 12th. The grass minimum was 37.0° on the 4th. Rain fell on 10 days to the amount of 1.133 inches, .240 inch being measured on the 14th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 173.5, giving a daily average of 5.8 hours. The corresponding figures for 1905 were 217.6 hours and 7.3 hours; 1906, 210.3 hours and 7.0 hours; 1907, 129.4 hours and 4.3 hours; 1908, 181.4 hours and 6.2 hours; 1909, 168.7 hours and 5.3 hours; 1910, 139.9 hours and 4.7 hours; 1911, 190.9 hours and 6.4 hours; and 1912, 161.7 hours and 5.4 hours. The mean earth temperature read at 9 a.m. was 57.7° at a depth of 1 foot below the surface of the ground, 54.0° at a depth of 4 feet.

JULY.—A generally fine, uneventful month, of clouded skies, heavy atmosphere, scanty rainfall, and remarkably persistent northerly winds. The mean temperature was 1.3° below the average, the mean diurnal range, which was small for July, being only 12.6° —that is, from 52.9° (the mean minimum) to 65.5° (the mean maximum). The former value was 1.3° below the average (54.2°), the latter was also an equal amount below the average (66.8°), and so it came to pass that the mean temperature of the month was 1.3° below the average. The foregoing remarks apply especially to Dublin. Speaking more generally, the weather in Ireland was much finer than that experienced in Great Britain, and particularly along the east coast of England.

The last-named region was swept by a very destructive polar gale on the night of Tuesday, the 22nd, and the forenoon of Wednesday, the 23rd. At Aberdeen, a squall from N.W. blew with a velocity of 47 miles an hour at 11 p.m. of the 22nd; at Spurn Head the wind reached a like velocity at 6 a.m. of the 23rd. The storm was connected with the rapid movement of an atmospheric depression from the south of Sweden to Holland; at 7 a.m. of the 23rd the barometer fell to 29.62 inches at the Heider, whereas it stood as high as 30.31 inches at Malm Head, Donegal, and 30.33 inches at Scarborough (Helmstedt). The prevailing northerly winds of the month were determined by a persistent high pressure system (anticyclone) over the Atlantic between Iceland and the British Isles, while atmospheric pressure was relatively low and conditions cyclonic in Scandinavia and over Central Europe.

A notable feature in the month also was a spell of tropical heat felt at Hapagowide, on the Gulf of Bothnia (lat. 65° 58' N.), from the 10th to the 18th, the thermometer rising to 86° at that Arctic Circle station on the 17th. Another noteworthy point was the showery, dull character of the middle fortnight of the month. This spell was followed by uninterrupted dry weather from the 22nd to the close.

In Dublin the arithmetical mean temperature (59.2°) was 1.3° below the average of the 35 years, 1871-1905 (60.5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58.5°. In the forty-nine years ending with 1913, July was coldest in 1879 ("the cold year") (M.T. = 37.3°). It was warmest in 1905 (M.T. = 63.8°); and in 1887 (M.T. = 63.7°). In 1913 the M.T. was 58.6°; in 1911 it was 63.5°.

The mean height of the barometer was 30.120 inches, or 0.205 inch above the corrected average value for July—namely, 29.915 inches. The mercury rose to 30.453 inches at 9 a.m. of the 2nd, and fell to 29.858 inches at 9 a.m. of the 6th. The observed range of atmospheric pressure was, therefore, 0.595 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58.5°, or 1.0° above the value for June, 1913. Using the formula $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times .463$, the value was 58.8°, or 1.3° below the average mean temperature for July, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (60.1°). The arithmetical mean of the maximal and minimal readings was 59.2°, compared with a thirty-five years average of 60.5°. On the 2nd the thermometer in the screen rose to 72.4°—wind, N.; on the 8th the screened thermometer fell to 44.1°—wind, N., N.W. The minimum on the grass was 41.8°, also on the 8th.

The rainfall was .634 inch, distributed over 13 days. The average rainfall for July in the thirty-five years, 1871-1905, inclusive, was 2.680 inches, and the average number of rain-days was 17. The rainfall therefore, was less than one-fourth of the average, whereas the rain days were only 4 below the average. In 1880 the rainfall in July was very large—4.087 inches on 21 days; in 1896, also, 5.474 inches fell on 18 days. On the other hand, in 1870, only .530 inch was measured on 8 days; in 1859 the fall was only .739 inch on 9 days; and in 1868 .741 inch fell on but five days. In 1911, 2.094 inches fell on 14 days, and in 1912, 3.026 inches on 17 days.

No high winds were noted in Dublin. Temperature reached or exceeded 70° in the screen on only 5 days, compared with 4 days in 1912, 21 days in 1911, 4 days in 1910, 3 days in 1909, 9 days in 1908, and 1907, 19 in 1906, 17 in 1905, and 10 in 1904. The thermometer never failed to reach 60°. In 1888 the maximum for July was only 68.7°.

A thunderstorm occurred on the afternoon of the 14th. Solar halos were seen on the 8th and 30th. There was marked visibility on the morning of the 12th, following by a fog in the evening. From the 24th the atmosphere was very hazy.

The rainfall in Dublin during the seven months ending July, 31st amounted to 15.731 inches on 117 days, compared with 16.811 inches on 127 days in 1912; 10.123 inches on 94 days in 1911; 21.032 inches on 127 days in 1910; 15.337 inches on 106 days in 1909; 13.809 inches on 120 days in 1908; 14.358 inches on 127 days in 1907; 13.464 inches on 132 days in 1906; 11.022 inches on 105 days in 1905; 12.906 inches on 117 days in 1904; 19.072 inches on 131 days in 1903; 15.507 inches on 113 days in 1902; 11.452 inches on 93 days in 1901, only 7.033 inches on 80 days in 1899, and a thirty-five years' (1871-1905) average of 14.710 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m., was 59.6°. The arithmetical mean of the daily maximal and minimal temperatures was also 59.6°, the mean maximum being 65.9°, and the mean minimum 52.4°. The screened thermometers rose to 74.0° on the 23rd, and fell to 43.2° on the 8th. On the 8th the grass minimum was 38.0°. Rain fell on 10 days to the amount of .596 inch, the greatest fall in 24 hours being .143 inch on the 18th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 150.2 hours, of which 13.5 hours occurred on the 1st. The mean daily duration was 4.0 hours. In July, 1904, there were 205 hours of bright sunshine; in 1905, 162.2 hours; in 1906, 184.8 hours; in 1907, 178.1 hours; in 1908, 174.3 hours; in 1909, 139.8 hours; in 1910, 205.0 hours; in 1911, 221.8 hours; and in 1912, 153.0 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 foot, 49.6°; at 4 feet, 58.8°.

AUGUST—The splendid summer-like August of 1911 was followed by the dull, cold, wet, and generally inclement August of 1912; and this had now been followed by an extremely fine, dry, bright and warm August in 1913.

As regards atmospheric pressure, the outstanding feature was the tendency to a high barometer reading over Ireland and the adjoining portions of the Atlantic. This led to a remarkable prevalence of northerly (between N.W. and N.E.) winds, which blew gently in Ireland but more strongly over Great Britain. As

was to be expected from this, the weather was finer in Ireland than in the sister island. On three occasions, however, the weather broke—first, from the 8th to the 11th, when the secondary systems of a large but shallow depression centred in Scandinavia and the Baltic passed southwards across the British Isles. In that interval Dublin City received 1.387 inch of rain in heavy showers. The second disturbed period began on the 21st, lasting to the 23rd. It was related to a depression, in which the barometer fell below 29.2 inches in the South of Ireland. Strong S.W. winds and showers resulted, the rainfall being heaviest round the S., W., and N. shores of Ireland. Lastly, a shallow thunderstorm depression, which moved slowly northwards from Morocco to the English Channel, caused severe thunderstorms in many parts of the United Kingdom, and torrential rains in the South and South-east of England on Sunday, the 31st. Dublin escaped this visitation, and the 31st was a beautiful summer's day in and near the Irish capital. Special mention should be made of a magnificent meteor which passed over the South of Ireland at 10.55 p.m. of the 3rd. It was seen also from Greystones, Co. Wicklow, and from St. George's Channel near Holyhead.

In Dublin the arithmetical mean temperature (59.7°) was exactly equal to the average (59.7°). The mean of the dry-bulb readings at 9 a.m. and 9 p.m. was 59.1°. The mean maximum temperature was 65.9°; the mean minimum was 53.2°. In the forty-nine years ending with 1913, August was coldest in 1912 (M. T. = 54.4°) and in 1881 (M. T. = 57.0°), and warmest in 1869 (M. T. = 63.4°). In 1911 the M. T. was 63.5°.

The mean height of the barometer was 30.002 inches, or 0.195 inch above the corrected average value for August—namely, 29.897 inches. The mercury rose to 30.332 inches at 9 a.m. of the 27th, and fell to 29.749 inches at 9 p.m. of the 26th. The observed range of atmospheric pressure was, therefore, 0.583 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59.1°. It was 0.6° above the value for July, 1913. Using the formula, $Mean Temp. = Min. + (Max. - Min.) \times .47$, the mean temperature was 59.3°, or equal to the average mean temperature for August, calculated in the same way, in the thirty-five years 1871-1905 inclusive (59.3°). The arithmetical mean of the maximal and minimal readings was 59.1°, compared with a thirty-five years' average of 59.7°. On the 14th the thermometer in the screen rose to 75.3°—wind, W.; on the 12th, the temperature fell to 46.8°—wind N.N.W. The minimum on the grass was 44.8° on the 12th, and again on the 19th. August, 1912, established a record for low temperatures.

The rainfall was .941 inch on 10 days. The average rainfall for August in the thirty-five years, 1871-1905 inclusive, was 3.240 inches, and the average number of rain-days was 18. The rainfall, therefore, and the rain-days were much below the average. In 1900 the rainfall in August was very large—5.871 inches on 17 days; in 1889, also 5.747 inches were registered on 22 days. On the other hand, in 1884, only .777 inch was measured on 8 days. August, 1903, established a record for rainfall in this month in Dublin, the measurement was 7.019 inches on 22 days, 5.435 inches having fallen on the 26th. In 1912 the rainfall was as much as 5.277 inches on 23 days.

Fresh winds were noted on 4 days, but never attained the force of a gale (8). Temperature reached or exceeded 70° in the screen on 6 days, and on 8 days fell below 50°. A solar halo was seen on the 12th. Lightning was seen on the 3rd, 28th, and 29th.

The rainfall in Dublin during the eight months ending August 31st amounted to 16.472 inches on 127 days, compared with 22.088 inches on 150 days in 1912, 11.592 inches on 103 days in 1911, 24.332 inches on 149 days in 1910, 16.677 inches on 119 days in 1909, 17.244 inches on 135 days in 1908, 16.583 inches on 146 days in 1907, 15.425 inches on 139 days in 1906, only 9.455 inches on 96 days during the same period in 1885, and a thirty-five years' average (1871-1905) of 17.950 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 60.3°. The arithmetical mean of the daily maximal and minimal temperatures was 60.3°, the mean maximum being 67.5°, and the mean minimum 53.1°. The screened thermometer rose to 77° on the 14th, and fell to 46° on the 12th. On the 12th, 19th, 26th, and 26th the grass minimum was 42°. Rain fell on 8 days to the amount of .94 inch, the greatest fall in 24 hours being .37 inch on the 9th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 107.4 hours, of which 10.6 hours occurred on the 17th and again on the 31st. The mean daily duration was 5.4 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 foot, 61.8°; at 4 feet, 58.6°.

SEPTEMBER.—The fine, dry weather of the summer of 1913 lasted till the 8th of September, on the afternoon of which day a shallow depression formed over Ireland within the limits of a large anticyclone covering the Atlantic and stretching across Central Europe to Russia. This system caused a general though not heavy rainfall. A rapid reduction of atmospheric pressure took place on the 11th and 12th in connection with the rainfall. A rapid reduction of atmospheric pressure took place in which the barometer fell below 29 inches. On the advance south-eastward from Ireland of a depression in which the barometer fell below 29 inches. On the 12th a secondary disturbance formed over Ireland, South Wales and the Danish Peninsula. In connection with this system rain fell heavily, Dublin receiving 1.638 inches in the 48 hours ended 9 a.m. of Sunday, the 14th. At that time the centre of a well-marked cyclone lay over Wales. Thence it travelled backwards to the east and across Ireland, finally again doubling on its course and filling up over the Bay of Biscay. After a brief respite of fine but cold weather, a V-shaped depression arrived over Ireland from the Atlantic on the 19th. This system caused a downpour of rain on the east coast—1.602 inches being recorded in Dublin, 2.60 inches at Malahide, Co. Dubh, and 3.77 inches at Ardgillan, near Ballygannon, Co. Dubh. The precipitation was much less on the Wicklow coast. Another heavy rainfall occurred on the 22nd in connection with a large depression on the Atlantic off the west coast of Ireland. The changeable weather lasted to the 27th, but the closing days of the month were very fine, and a heat-wave passed over the greater part of England; the thermometer rose to 78° in London, and at Manchester, Nottingham, Bath and Malvern on Saturday,

the 27th. That day was very wet in the west of Ireland, Blacksod Point having 1.14 inches of rain, and Valentia .72 inch. In a violent thunderstorm which passed over the south of France on the 29th, 4.33 inches of rain fell at Perpignan and as much at 4.54 inches at Cap Bearn. At Certe the measurement was 1.83 inches.

In Dublin the arithmetical mean temperature (56.5°) was 0.6° above the average (55.9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 55.7° . In the forty-nine years ending with 1913, September was coldest in 1895 and 1892 (M. T. = 55.0°), and warmest in 1895 (M. T. = 61.4°) and 1896 (M. T. = 60.8°). In 1913 the M. T. was 53.7° .

The mean height of the barometer was 29.562 inches, or 0.042 inch above the corrected average value for September—namely, 29.520 inches. The mercury rose to 30.470 inches at 9 a.m. of the 7th, and fell to 29.030 inches at 4 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1.440 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55.7° , or 5.4° below the value for August, 1913. Using the formula, $\text{Mean Temp.} = \text{Max.} + (\text{Max.} - \text{Min.}) \times .476$, the mean temperature was 56.3° , or 0.6° above the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (55.7°). The arithmetical mean of the maximal and minimal readings was 56.5° , compared with a thirty-five years' average of 55.9° . The mean maximum was 61.6° ; the mean minimum was 51.4° . On the 11th the thermometer in the screen rose to 70.0° —wind, W. to S.W.; on the 16th the temperature fell to 41.5° —wind, W.N.W. The minimum on the grass was 39.4° on the 18th.

The rainfall was 4.319 inches on 15 days. The average rainfall for September in the thirty-five years, 1871-1905, inclusive, was 3.250 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4.648 inches on, however, only 13 days; in 1896 no less than 5.073 inches fell on 25 days, establishing a record rainfall for September. On the other hand, in 1865, only .056 inch was measured on but 3 days. In 1913 only .559 inch fell on 8 days.

High winds were noted on 8 days, but never attained the force of a gale. Fog occurred on the 22nd and 27th. A heavy hail was seen on the 29th.

The rainfall in Dublin during the nine months ending September 30th, amounted to 20.683 inches on 140 days, compared with 22.638 inches on 158 days in 1912, 12.000 inches on 120 days in 1911, 25.106 inches on 130 days in 1910, 18.490 inches on 134 days in 1909, 19.557 inches on 124 days in 1908, 17.140 inches on 133 days in 1907, 16.121 inches on 146 days in 1906, only 10.946 inches on 112 days in 1897, and a thirty-five years' average on 20.160 inches on 146 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean value of the readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 57.2° . The arithmetical mean of the daily maximal and minimal temperatures was 56.8° , the mean maximum being 62.7° , and the mean minimum, 50.5° . The screened thermometer rose to 72° on the 11th, and fell to 41° on the 16th. On the 19th the grass minimum was 37° . Rain fell on 10 days to the amount of 4.26 inches, the greatest fall in 24 hours being 1.90 inches on the 19th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 81.8 hours, of which 9.3 hours occurred on the 11th. The mean daily duration was 2.8 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 foot, 58.1° ; at 4 feet, 57.5° .

OCTOBER.—A mild but changeable month. Easterly winds (between N.E. and S.E.) prevailed during the first ten days; southerly (between S.E. and S.W.) winds for the most part afterwards, except from the 22nd to the 25th inclusive, when light northerly winds and calms brought such a reduction of temperature that the screened thermometer fell to 26° at Burr Castle and to 36° in Dublin and at Valentia on the morning of the 24th. Notwithstanding this "cold snap" the mean temperature of the month in Dublin was 2.4° above the average for October. The rainfall was very large—3.709 inches—but it consisted largely of heavy squalls, such as .960 inch on the 7th, .771 inch on the 5th, .445 inch on the 27th, .361 inch on the 10th, and .361 inch on the 28th. In the week ended the 11th, 2.133 inches were recorded; in six days ended the 30th, the measurements totalled 1.173 inches.

In Dublin the mean maximal temperature was 56.7° , compared with the average (54.7°); and the mean minimal temperature was 47.4° , compared with the average, 44.3° . The arithmetical mean temperature (52.1°) was 2.8° above the average (49.3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 50.6° . In the forty-nine years ending with 1913, October was coldest in 1892 (M. T. = 44.8°) and in 1896 (M. T. = 45.0°). It was warmest in 1906 (M. T. = 53.4°), and in 1876 (M. T. = 53.1°). In 1912, the M. T. was 54.9° .

The mean height of the barometer was 29.768 inches, or 0.072 inch below the corrected average value for October—namely, 29.840 inches. The mercury rose to 30.332 inches at 9 p.m. of the 23rd, and fell to 28.857 inches at 4 p.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1.475 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50.6° , or 2.9° below the value for September, 1913. The arithmetical mean of the maximal and minimal readings was 52.1 , compared with a thirty-five years' (1871-1905) average of 49.5° . Using the formula, $\text{Mean Temp.} = \text{Max.} + (\text{Max.} - \text{Min.}) \times .465$, the mean temperature was 51.9° , or 2.6° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871-1905, inclusive (49.3°). On the 15th the thermometer in the screen rose to 64.6° —wind, S.; on the 26th the temperature fell to 30.0° —wind, W.N.W. The minimum on the grass was 28.0° , also on the 26th.

The rainfall was 3.769 inches, distributed over 17 days. The rainfall was considerably above, while the rain-days were slightly below, the average. The average rainfall for October in the thirty-five years, 1871-1905, inclusive, was 3.870 inches, and the average number of rain-days was 18. In 1886 the rainfall in October was very large—7.328 inches on 16 days. In 1875, also, 7.049 inches fell on 26 days. On the other hand, in 1904 only .454 inch fell on 11 days, in 1890 only .639 inch fell on 11 days, in 1884 only .834 inch on but 14 days, and in 1868 only .866 inch on 15 days. In 1911, 3.787 inches were recorded on 20 days, and in 1912, 1.665 inches on 13 days.

High winds (force 4 to 7) were noted on 9 days, but attained the force of a gale on only 1 day—the 6th. The atmosphere was foggy in Dublin on the 8th and 29th. There was a lunar corona on the 11th. Lightning was seen on the 20th.

The rainfall in Dublin during the ten months ending October 31st, 1913, amounted to 24.742 inches on 151 days, compared with 24.323 inches on 171 days in 1912, 16.386 inches on 140 days in 1911, 27.339 inches on 177 days in 1910, 21.100 inches on 158 days in 1909, 12.346 inches on 125 days during the same period in 1887 (the dry year), and a thirty-five years' (1871-1905) average of 23.090 inches on 164 days.

Mrs. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.766 inches, the range of atmospheric pressure being from 30.30 inches at 9 p.m. of the 23rd to 28.94 inches at 9 a.m. of the 29th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 52.4°. The arithmetical mean of the daily maximal and minimal temperatures was 52.8°. The wetted thermometers rose to 65° on the 13th and 18th, and fell to 39° on the 26th. On the 26th and 29th the grass minimum was 26°. Rain fell on 16 days to the amount of 3.60 inches, the greatest fall in 24 hours being .87 inch on the 7th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 77.6 hours, of which 10.0 hours occurred on the 9th. The mean daily sunshine was 2.5 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 53.5°; at a depth of 4 feet it was 54.9°.

NOVEMBER.—A singularly mild and open month of brisk S.W. and W. winds, and an almost entire absence of fog. Rain fell frequently, and in excessive amounts in the south-west and west of Ireland, as well as in many parts of Great Britain. The general distribution of atmospheric pressure favoured this type of weather. The barometer was for the most part extremely low in Ireland and on the Atlantic between that island and the British Isles, whereas an anticyclonic ridge for the most part stretched from the Azores to Spain and often still farther eastward to Central Europe. On the morning of the 17th the barometer was down to 28.21 inches at Vestmanna, on the south coast of Iceland, whereas it stood at 30.53 inches at Corunna, in the north-west of Spain. Again, at 7 a.m. of the 28th pressure ranged from 28.32 inches at Vestmanna to 30.54 inches at Corunna. These readings indicated the existence of a very steep gradient for south-westerly winds on the Atlantic shores of Europe. During the three weeks ended on Saturday, the 22nd, the weather was in a very unstable condition, being exceedingly changeable and unsettled, with frequent rain and occasional fine intervals and spoils of bright sunshine in the daytime. On the 22nd an area of high pressure spread over the United Kingdom from the southward, but next day a V-shaped depression off the west coast of Ireland caused a southerly gale in this country. On and after the 26th, however, the weather became relatively fine owing to the extension of an anticyclone over the southern half of the British Isles from the Atlantic and the Bay of Biscay. The angular midlines of the month was not interrupted by thinning, and November closed with the thermometer rising to 55°, and 56° and even 57° at several English stations.

In Dublin the arithmetical mean temperature (47.7°) was 2.4° above the average (45.3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 44.8°. In the forty-nine years ending with 1913, November was coldest in 1878 (M. T. = 38.2°), and in 1910 (M. T. = 40.8°); warmest in 1880 (M. T. = 50.7°), and in 1881 (M. T. = 50.3°).

The mean height of the barometer was 29.702 inches, or 0.068 inch below the corrected average value for November—namely, 29.860 inches. The mercury rose to 30.453 inches at 9 a.m. of the 28th, and fell to 29.023 inches at 7 a.m. of the 12th. The observed range of atmospheric pressure was, therefore, 1.430 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46.8°, or 4.0° below the value for October, 1913. The arithmetical mean of the maximal and minimal readings was 47.7° compared with a thirty-five years' (1871-1905) average of 45.3°. The mean maximum in the screen was 52.6°, the mean minimum was 42.8°, and the mean minimum on the grass was 40.6°. On the 17th the thermometer in the screen rose to 57.1°—wind, W.; on the 22nd the temperature fell to 35.3°—wind, W. The minimum on the grass was 32.2°, also on the 22nd.

The rainfall was 2.237 inches on 21 days—the rainfall was below, but the rain-days were above the average. The average rainfall for November in the thirty-five years, 1871-1905, inclusive, was 2.120 inches, and the average number of rain-days was 17. In 1888, 6.429 inches fell on 29 days. On the other hand, the rainfall in 1896 was only .664 inch on 9 days. In 1912 the rainfall was 1.456 inches on 14 days.

High winds were noted on 13 days, and attained the force of a gale on 3 days—the 2nd, 15th and 18th. A solar halo appeared on the 2nd, and a lunar corona on the 8th, 13th and 14th.

The rainfall in Dublin during the eleven months ending November 30th, amounted to 24.879 inches on 178 days, compared with 25.781 inches on 185 days in 1912, 19.404 inches on 163 days in 1911, 16.378 inches on 141 days during the same period in 1887, and a thirty-five years' average of 25.790 inches on 181 days.

Mr. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.785 inches, the range of atmospheric pressure being from 30.41 inches at 9 a.m. of the 28th to 29.06 inches at 9 a.m. of the 12th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 48.0°. The arithmetical mean of the daily maximal and minimal temperatures was 48.7°. The screened thermometers rose to 50.0° on the 10th and fell to 36.8° on the 22nd. The grass minimum was 26° on the 4th. Rain fell on 18 days to the amount of 2.168 inches, 1.540 inch being measured on the 7th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 43.7 hours, giving a daily average of 2.1 hours. The mean temperature of the soil at 9 a.m. was 41.6° at a depth of one foot below the surface of the ground, 50.5° at a depth of 4 feet.

DECEMBER.—December was a month of extremes as regards air temperature. Up to the 16th it was singularly mild owing to the constant prevalence of winds from westerly points blowing on shore off the Atlantic. These winds were determined by a high pressure system which stretched from the Azores to Spain and France, while atmospheric depressions often of considerable depth and intensity passed eastwards from Ireland to Northern Europe. In the interval from the 3rd to the 8th, one of these low pressure systems travelled from the Hebrides to Lapland. Snow fell in Scotland as the disturbance crossed that part of the Kingdom and on the early morning of the 6th a very severe frost occurred over the northern parts of Great Britain, the thermometer falling to 25° at North Shields, 24° at Aberdeen, 23° at Leith, 19° at Wick, and 15° at Nairn. At Balmoral the minimum in the screen was 7°. By the morning of the next day, Sunday, the 7th, the thermometer had risen to 41° at Wick. After this brief spell of cold, the mild weather became established again in Scotland. On the 10th an anticyclone spread over Ireland from the South, the westerly winds died out and light easterly winds set in, accompanied in Ireland by a densely clouded sky. In Dublin the sun was not seen on the 17th or on the three following days. With a clearing sky on the 21st temperature gave way, remaining low to the end of the month, except for a brief space on the 25th and 26th when strong S.W. winds and rain prevailed. As the depression which caused this break in the weather, travelled south-eastwards from the south of Norway across Central Europe to the Mediterranean anovfalls and severe frost accompanied it or followed in its wake. Thus it came about that even in Ireland the mean temperature of the month was about the normal, notwithstanding the great mildness of the first fortnight. A special feature in the month's weather was the frequency of sheet lightning at night, particularly during the first week, when thunder-storms passed over some districts in both Ireland and Scotland.

In Dublin the arithmetical mean temperature (42.3°) was slightly above the average (42.0°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41.5°. In the forty-nine years ending with 1913, December was coldest in 1878 (M.T. = 33.8°), and in 1874 (M.T. = 36.8°); warmest in 1898 (M.T. = 47.6°), and in 1909 and 1906 (M.T. = 47.1°). In December, 1912, the M.T. was 46.1°.

The mean height of the barometer was 30.106 inches, or 0.230 inch above the corrected average value for December—namely, 29.876 inches. The mercury rose to 30.726 inches at 9 a.m. of the 21st, and fell to 28.950 inches at 6 p.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 1.776 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41.6°, or 5.3° below the value for November, 1913. Using the formula $Mean Temp. = Min. + (Max. - Min.) \times .02$, the value was 48.5°, or 0.4° above the average mean temperature for December, calculated in the same way, as the thirty-five years, 1871-1905 inclusive (48.1°). The arithmetical mean of the maximal and minimal readings was 42.3°, compared with a thirty-five years' average of 42.0°. On the 8th the thermometer in the screen rose to 56.8°—wind, S.W.; on the 31st the temperature fell to 25.6°—wind, calm. The minimum on the grass was 23.9° on the 31st. Frost in the screen occurred on the last 3 nights, and 9 nights of frost on the grass were recorded.

The rainfall was 1.863 inches, distributed over 12 days. The average rainfall for December in the thirty-five years, 1871-1905, was 2.250 inches, and the average number of rain-days was 17. The rainfall, therefore, and also the rain-days were considerably below the average. In 1876 the rainfall in December was very large—2.566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4.749 inches fell on as many as 21 days. In 1911 also, 4.073 inches fell on 26 days in December. On the other hand, in 1887, only .771 inch was measured on 13 days; in 1885, only .742 inch on 10 days; in 1892, only .736 inch on 10 days; and in 1871, only .797 inch on 15 days. In 1912, the rainfall was 1.888 inches, but the rain-days were as many as 23.

High winds were noted on 11 days, and attained the force of a gale on three occasions—the 3rd, 4th, and 26th. The atmosphere was foggy in Dublin on the 26th, and 31st. Snow or sleet fell on the 4th, 24th, and 28th; hail on the 4th, 26th, and 31st. A lunar halo was seen on the 9th and 11th; a lunar corona on the 11th. Lightning was seen on the 3rd, 5th, 25th, and 28th. Snow lay during the last 4 days.

The rainfall in Dublin during 1913 amounted to 26.842 inches on 160 days, compared with 27.649 inches on 206 days in 1912, 25.477 inches on 189 days in 1911, 35.439 inches on 219 days in 1910, only 16.601 inches on 160 days in 1887, and a thirty-five years' (1871-1905) average of 28.000 inches on 198 days.

Mr. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30.102 inches, the range of atmospheric pressure being from 30.68 inches at 9 a.m. of the 21st to 29.19 (1) inches at 9 p.m. of the 3rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42.6°. The arithmetical mean of the daily maximal and minimal temperatures was 43.1°. The screened thermometers rose to 57.0° on the 8th, and fell to 35.0° on the 31st. On the 31st the grass minimum was 19.0°. Rain fell on 11 days to the amount of 1.784 inches, the greatest fall in 24 hours being .620 inch on the 3rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 17.9 hours of which 3.0 hours occurred on the 1st. The mean daily sunshine was .38 hour. The mean temperature of the soil at 9 a.m. at a depth of one foot was 44.5°; at a depth of 4 feet it was 47.9°.

RAINFALL IN 1913.

At 40 Fitzwilliam Square, West, Dublin.

Rain Gauge:—Diameter of Funnel, 8 in. Height of tap—Above ground, 1 ft. 4 in.; above sea level, 54 ft.

The rainfall was 28.642 inches, or 0.842 inch more than the average annual measurement of the thirty-five years, 1871-1905, inclusive—viz., 28.000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16.001 inches. In 1870 only 20.809 inches fell; in 1884 the measurement was 20.467 inches; in 1883 it was 20.473 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32.906 inches—or as nearly as possible double the fall of 1887—fell on 250 days. In 1900 the rainfall was 34.334 inches, or 4.333 inches in excess of the average for the thirty-five years, 1871-1905. In 1910, also, the rainfall was very large, 35.439 inches on 219 days. Only once since these records commenced has the rainfall in Dublin exceeded that of 1910—namely in 1832, when 35.566 inches fell on 258 days. In 1890 34.513 inches were measured on, however, only 188 days.

In 1913 there were 190 "rain-days," or days upon which not less than .006 inch of rain (five-thousandths of an inch) was measured. This was 8 under the average number of rain-days, which was 198, in the thirty-five years, 1871-1905, inclusive. In 1868 and 1867—the warm, dry years, of recent times—the rain-days were only 160, and in 1870 they were only 145.

On only two occasions in 1913 did one inch of rain fall on a given day in Dublin—viz., January 10th, 1.522 inches and September 19th, 1.652 inches. In 1900, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2.037 inches. In 1902, 1.342 inches fell on July 25th, and 2.015 inches on September 2nd. An excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3.426 inches in Dublin (Fitzwilliam Square). On no previous occasion within the past 47 years had 3 inches or upwards been measured. It was the ninth occasion only since 1860—that is, in 47 years inclusive—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2.482 inches); October 27th, 1880 (2.136 inches); May 26th, 1892 (2.056 inches); July 24th, 1896 (2.029 inches); August 6th, 1899 (2.227 inches); August 2nd, 1900 (2.426 inches); November 11th, 1900 (2.037 inches); and September 2nd, 1902 (2.075 inches).

The rainfall in the first six months of 1913 was 15.067 inches on 104 days. In the second six months it was 13.745 inches on 86 days.

The rainfall was distributed quarterly as follows:—8.333 inches fell on 55 days in the first quarter, 6.764 inches on 49 days in the second, 5.855 inches on 36 days in the third, 7.690 inches on 50 days in the fourth quarter.

Included in the 190 rain-days in 1913 are 12 on which snow or sleet fell, and 20 on which there was hail. In January hail was observed on 3 days, in February on 1 day, in March on 6 days, in April on 3 days, in May on 1 day, in June on 1 day, in December on 3 days. Snow or sleet fell on 4 days in January, 4 days in March, 1 day in April, and 3 days in December. A thunderstorm occurred once each in June and July. Thunder was heard without visible lightning once in May. Lightning was seen once in January, twice in March, thrice in August, and four times in December.

Mist or less fog prevailed on 14 occasions—2 in January, 4 in February, 1 in July, 2 in September, 1 in October, and 2 in December. High winds amounted to gales (force 8 or upwards, according to the Beaufort scale) on 19 occasions—5 in January, 1 in February, 3 in March, 1 in April, 2 in May, 1 in June, 1 in October, 3 in November, and 3 in December.

Solar halos were seen on 10 days, a lunar halo on 9 nights, a lunar coronas on 11 nights.

The Rev. Arthur Wilson, M.A. reports that at the Rectory, Dunmurry, Co. Dub., the total rainfall for 1913 was 66.63 inches on 225 days, which is 9.15 inches above the average of the last 7 years. The rain-days were 8 short of the average. The heaviest rainfall up to 1913 was in 1911, in which year 66.10 inches fell on 215 days. In 1912, rain fell on as many as 211 days to the total amount of 61.97 inches.

NOTE.—The temperatures given above were deduced from the mercurial and alcohol readings of the thermometer. The Fahrenheit scale was the following:—Mean Temperature = Max. + (Min.—Min.) ÷ 2, the so-called C varying from north to south.

[illegible]

DUBLIN CASTLE,

8th July, 1914.

SIR,

I have to acknowledge the receipt of your letter of the 4th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Annual Report of the Registrar-General for Ireland of Marriages, Births and Deaths during the year 1913.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Registrar-General,
General Register Office,
Charlemont House,
Dublin.
